Supplementary Table 6 – VLSM results for word recognition controlling for object recognition; p<0.050 permutation correction: z<-5.26 z>3.19. These are regions whose lesion was associated with lower word recognition. ROI based results are shown on the left (A), whereas the centers of the clusters with higher statistical association are shown on the right (B).

A - Percentage of ROI included in suprathreshold statistical map			B - Statistical Clusters				
ROI#	Abbreviated Name	%	-52	-30	-24	-5.64	PSIG_L
188	PSIG_L	0.2	-44	-34	-16	-4.96	FuG_L
49	FuG_L	0.4	-42	-48	-12	-5.03	FuG_L
			-42	-42	-10	-4.96	FuG_L
