**Supp. Table 2. Turnover of synthetic TAMRA-labeled peptides**

Peptide	Glycopeptide detected	Turnover after 5 min (%)	Relative turnover (%)
TAMRA-DANYTK	Yes	6	100
TAMRA-YANATS	Yes	84	1400
TAMRA-ADTYANATSDVL	Yes	10	167

TAMRA, tetramethylrhodamine

Turnover of TAMRA-labeled peptides after 5 min was determined using 0.5 µM OST3 complex, 20 µM indicated peptide and 150 µM LLO C20. Relative turnover compared to TAMRA-DANYTK is given by defining TAMRA-DANYTK turnover as 100 %.

**Supp. Figure 1 (to Figure 1C). Site-occupancy analysis of the OST subunits.**

The extracted ion chromatography (XIC) of the tryptic peptide with and without HexNAc (blue square) from (A) N99 of Ost1p, (B) N217 of Ost1p, (C) N400 of Ost1p, (D) N539 of Stt3p, (E) N60 of Wbp1p and (F) N332 of Wbp1p are shown for the OST3 complex (OST3) and the OST6 complex (OST6). The  $m/z$  of the peptides with and without HexNAc are summarized in Supp. Table 3. The mass tolerance of XIC was 10 ppm. The corresponding MS/MS spectra from Mascot results are shown in the lower panel of each figure together with the score and the expected P value. HE represents HexNAc on the indicated asparagine (N).

**Supp. Figure 2 (to Figure 1D). Glycosylation profiling of the OST subunits.**

The MS (upper panels) and MS/MS (lower panels) spectra from (A) N99 of Ost1p, (B) N217 of Ost1p, (C) N539 of Stt3p, (D) N60 of Wbp1p and (E) N332 of Wbp1p are shown. The  $m/z$  and structure details are summarized in Supp. Table 4. The  $m/z$  circled in red indicates the  $m/z$  corresponding to the drawn glycopeptide. Blue squares represent HexNAc; green circles represent mannose (a hexose).
