

Supplementary data

Figure S1

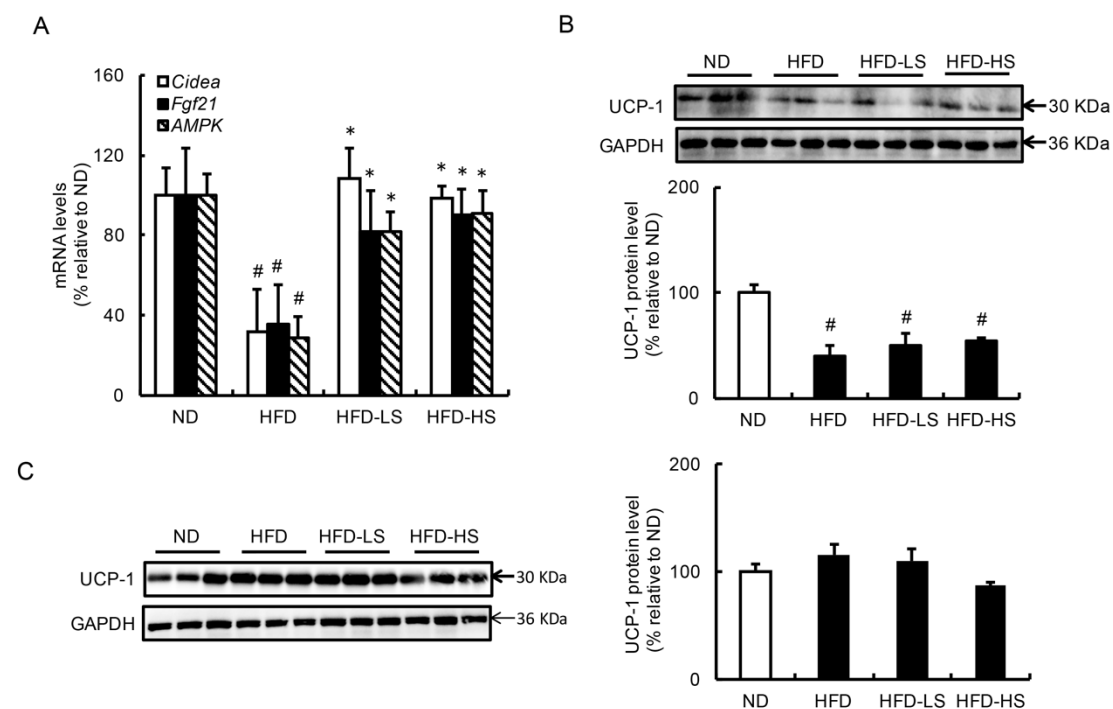

Figure S1. Sal A supplementation improves eWAT browning but not effect UCP-1 in subcutaneous (inguinal) and brown adipose tissues of HFD-fed mice. (A) The gene expressions of *Cidea*, *Fgf21*, and *AMPK* in eWAT. (B) The expression of UCP-1 in subcutaneous (inguinal) adipose tissues was detected by Western blot. (C) Protein expression of UCP-1 in brown adipose tissues. # $p < 0.05$ versus the ND group; * $p < 0.05$ versus the HFD group. All groups contain 12 animals ($n = 12$).
