

**Supplementary Figure S1. Schematic overview of hAEC injections in *Cfh*<sup>-/-</sup> mice.** hAEC or PBS were injected percutaneously in the liver of *Cfh*<sup>-/-</sup> mice at 10 days of life (D.O.L.) and via portal vein at 40 D.O.L. Mice were euthanized either 10 days or 40 days after the last hAEC injection (n=3-5 mice per each group).
