

Supplemental Figure 1.

Supplementary Figure 1. Serum Immunogenicity and Cytokine Measurements. Serum levels of N-803, IFN- γ , and IL-6 in A) IV treated patients or B) SQ treated patients. Colored lines denote N-803 dose, and each line represents a patient. n = 2-3 per cohort. C) Swimmer plot for IV N-803 patients depicting best clinical responses across follow-up by dose. n = 9. Red X denotes PD. * denotes rituximab-refractory patient.
