

human reproduction **SUPPLEMENTARY DATA**

Supplementary Figure S7. Differentially expressed genes (DEGs) and different pathways involved in the responses to hFSH18/21 and hFSH24 treatment. (a) Heatmap of the top 50 DEGs between FSH18/21 and FSH24 treatment ($P < 0.05$, $\log_2FC \geq 1.5$). (b) Protein–protein interaction (PPI) network (degree > 2) of DEGs of FSH18/21 treatment compared with FSH24 treatment. Red nodes represent upregulated genes ($P < 0.05$).
