

Data Sharing Statement

McArdle AJ, Vito O, Patel H, et al. Treatment of Multisystem Inflammatory Syndrome in Children. N Engl J Med. DOI: 10.1056/NEJMoa2102968.

Question	Authors' Response
Will the data collected for your study be made available to others?	Yes.
Would you like to offer context for your decision?	BATS has collected de-identified data from multiple institutions in many countries. Each institution has signed an agreement with Imperial College on data security. We will need to assess requests for data on a case-by-case basis to ensure that the data that are provided fall within the existing agreements within the consortium.
Which data?	De-identified clinical and laboratory findings and response to treatment for the cohort included in this study.
Additional information about data	Any data provided will be de-identified and will conform to the agreements within the consortium for data sharing.
How or where can the data be obtained?	On request to the corresponding author.
When will data availability begin?	On publication of the manuscript. However, as approval for all data will have to be obtained from the consortium and partner institutions, approximately 3 months may be required before the data is provided.
When will data availability end?	2 years after publication.
Will any supporting documents be available?	The study handbook and statistical analysis plan are available with the online publication at NEJM.org.
Which supporting documents?	—
Additional information about supporting documents	Additional information not covered by these documents can be provided on request to the study coordinator or corresponding author.
How or where can supporting documents be obtained?	In the online supplementary materials to this publication or on request as above.
When will supporting documents availability begin?	On publication.

When will supporting documents availability end?	2 years after conclusion of recruitment.
To whom will data be available?	Legitimate researchers and clinicians from medical and academic institutions.
For what type of analysis or purpose?	Only for academic and clinical research.
By what mechanism?	—
Any other restrictions?	—
Additional information	—
