Supplementary Table S2. Assigned disulfide bridged-peptides identified in the tryptic/chymotryptic digest of OBP1, OBP2 and OBP5 from Varroa destructor. Reported are the protein under investigation, amino acid sequence, amino acid position within corresponding protein sequence, experimental/theoretical mass value of the observed parent ion, modified cysteine residue, and software used for characterization. [§] Cysteine involved in disulfide bridge; * bridged or linear peptide with aspecific cut; [#] software used for identification.

Varroa destructor OBP1

Supplementary Table S3. Ligands tested with the four OBPs of *V. destructor*. Ligands are arranged in order of number of carbon atoms (No C). Tested ligands with each of the four proteins are marked by “v”.

No C	Ligand	OBP1	OBP2	OBP4	OBP5
		Tryptophan quenching	Competitive binding		
<i>Terpenoids</i>					
8	Vanillin	v	v	v	
10	Safranal	v	v	v	v
10	Coniferyl aldehyde	v	v	v	v
10	(+) Carvone	v			
10	(-) Carvone	v			
10	Citral				v
13	β -Ionone	v	v	v	v
13	Geranyl acetone			v	v
15	Farnesol	v			v
10	Ocimene			v	
<i>Aromatics</i>					
9	Homovanillyl alcohol	v	v	v	v
8	Piperonyl alcohol	v			
8	Methyl p-hydroxybenzoate	v	v	v	v
10	Carvacrol	v	v		
7	4-Methylcatechol	v	v		
13	Methoxybiphenyl	v	v		
7	Benzyl cyanide	v	v		
10	Eugenol	v		v	v
10	Thymol	v	v		
9	4-Isopropylphenol	v			
11	Methyleugenol	v	v		
9	Methoxyvinylphenol	v	v		
11	p-tert-Butylbenzaldehyde	v	v		v
10	Methoxycinnamaldehyde	v	v		
13	Cyclamen aldehyde	v	v		
11	Methoxyeugenol	v			
14	α -Pentylcinnamaldehyde	v	v	v	v
<i>Acids, esters, aldehydes, alcohols</i>					
10	Decanoic acid				v
10	Decanal				v
10	9-Ketodecanoic acid	v	v	v	v
12	Dodecanoic acid			v	
12	1-Dodecanol			v	
12	Ethyl decanoate				v
16	Z11-Hexadecenal			v	v
16	Ethyl myristate				v
18	Ethyl palmitate				v
18	Oleic acid			v	v

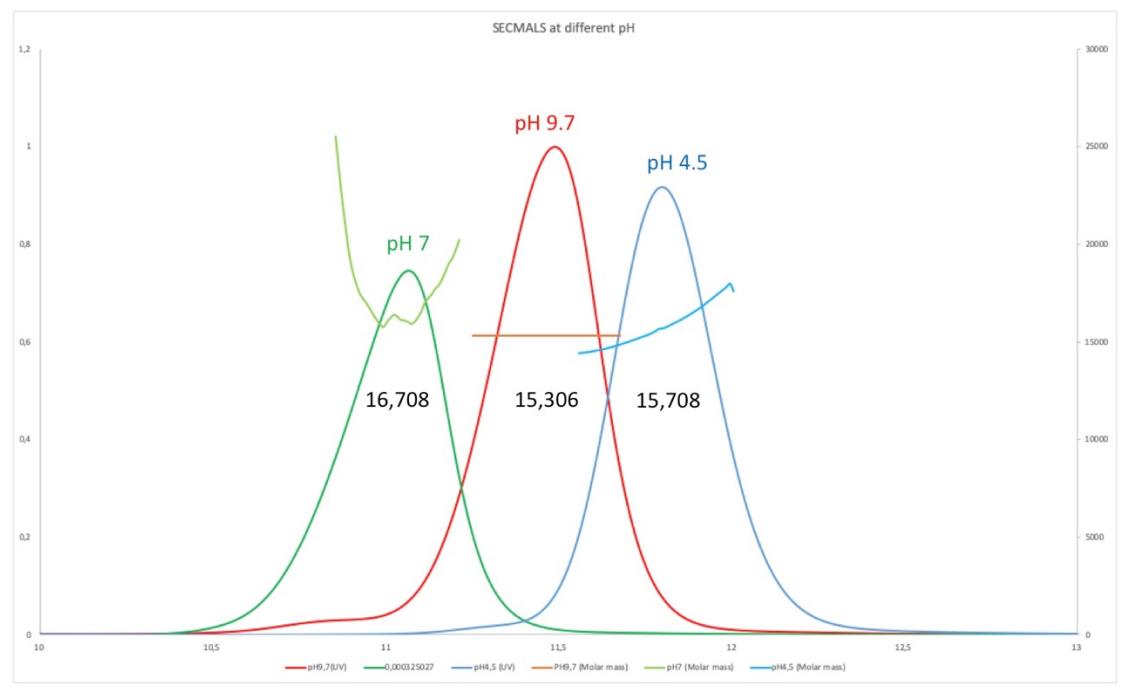

Supplementary Table S4. Primers used for cloning and expression of varroa OBPs. Restriction sites are underlined, stop codons are in bold.

Name	Sequence
VdesOBP1-Nde	CG <u>GCATATGGCCCCTCAGGCACCTGC</u>

Supplementary Figure S1. Fragmentation spectra of disulfide-bridged peptides identified in the tryptic-chymotryptic digest of *V. destructor* VdesOBP5 as revealed by nanoLC-ESI-Q-Orbitrap-MS/MS analysis.

The fragments are highlighted in different colours depending on peptides present in S-S-linked species, and on the corresponding b and y ion series. Complete data on disulphide-bridged peptides are reported in Supplementary Table S2 online.

Supplementary Fig. S2. Analysis of VdesOBP1 aggregation in solution at different pH values, namely 4.5, 7.0 and 9.7, using HPLC with multi-angle laser light scattering /UV/ refractometry (SEC-MALLS-RI) coupled detectors (Wyatt, Santa-Barbara, USA). Mass values of 15,708 Da (pH 4.5, blue), 16,143 Da (pH 7.5, green) and 15,306 Da (pH 9.7, red) were measured.

Supplementary Fig. S3. Ligand-binding assays with VdesOBP1 and VdesOBP2. With these two proteins we could not observe any blue shift in the fluorescence emission spectrum of 1-NPN in the presence of the protein. Therefore, we monitored the quenching of tryptophan intrinsic fluorescence caused by the entrance of a ligand in the binding pocket. Only chemicals capable of energy transfer were used in such assay. Tryptophan was excited at 295 nm and emitted fluorescence was measured around 335-340 nm.

Supplementary Fig. S4. Predicted phosphorylation sites (highlighted in blue) in the sequences of the five varroa OBPs. The six conserved cysteines are highlighted in yellow. The software used was NetPhos 3.1, which predicts serine, threonine and tyrosine potential phosphorylation sites in eukaryotic proteins. The predictions are relative to the following kinases: ATM, CKI, CKII, CaM-II, DNAPK, EGFR, GSK3, INSR, PKA, PKB, PKC, PKG, RSK, SRC, cdc2, cdk5 and p38MAPK.
