

Supplemental Figure 2. CaMKII δ does not contribute to the IL-6/JAK/STAT3-dependent increase in vascular permeability

Supplemental Figure 2. CaMKII δ does not contribute to the IL-6/JAK/STAT3-dependent increase in vascular permeability. ECIS plotted as normalized resistance over time. Resistance values are normalized to resistance value at time zero: time zero is time of IL-6/sIL-6r treatment. Adenoviruses and siRNA are introduced 24h before IL-6 treatment. n = 3. Two-way ANOVA with repeated measures, (*) p < 0.05.
