

Supplemental Table 4. The results for the association between PRS for alcohol intake amount and the risk of CKD or ESKD in those with low (≤ 7 drinks per week) phenotypical amount of alcohol use

Outcome	OR (95% CI)	p-value
ESKD	1.044 (0.825–0.321)	0.722
CKD	1.043 (0.976–1.115)	0.212

CI, confidence interval; CKD, chronic kidney disease; ESKD, end-stage kidney disease; OR, odds ratio; PRS, polygenic risk score.
