

Description of Additional Supplementary Files

File Name: Supplementary Data 1

Description: Host use of *Culex cedecei* from Florida, USA 2017. Vertebrate hosts of female mosquitoes determined by PCR and sequencing targeting conserved genes. Female mosquitoes were collected using artificial resting shelters (RT) and carbon dioxide-baited light traps (LT) at areas spanning a range of mammal communities and Burmese python abundances.

File Name: Supplementary Data 2

Description: Everglades virus infection in *Culex cedecei* from Florida, USA 2017. Pools of female mosquitoes were screened (mean pool size = 24.2 females) by RT-qPCR assay targeting non-structural protein 4. Female mosquitoes were collected using artificial resting shelters and baited light traps at areas spanning a range of mammal communities and Burmese python abundances.
