

Supplementary Appendix

Supplementary Figure 1: Analyzation of MOG-Ab positivity in CBA-FACS

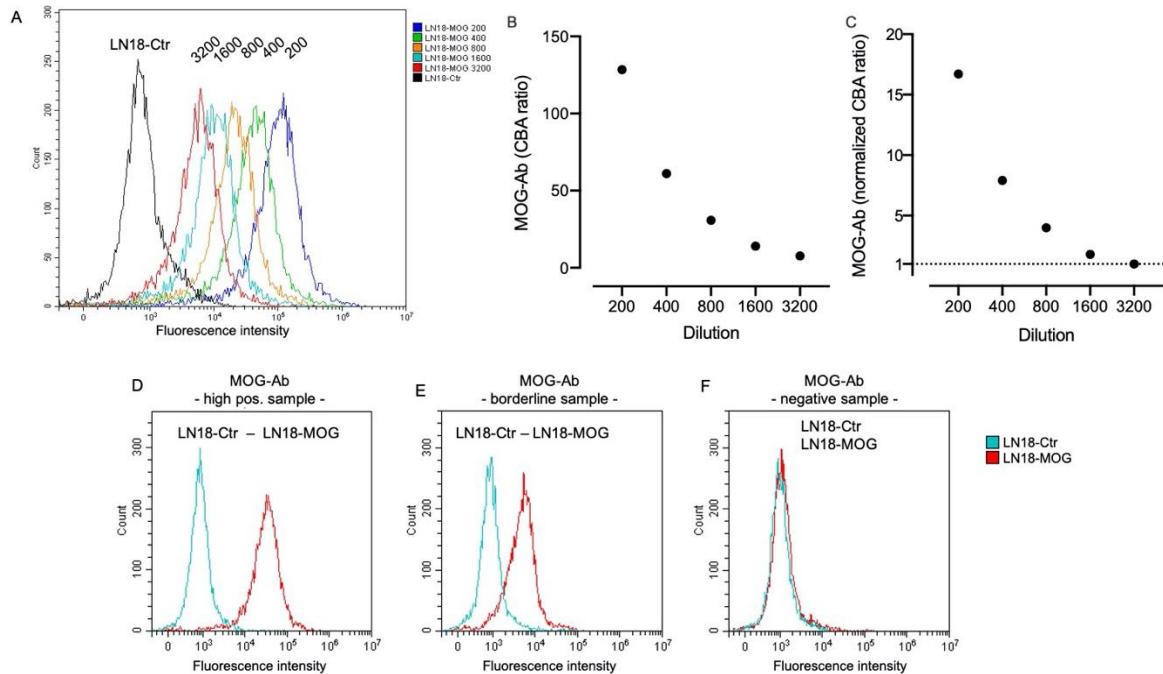

Figure 1: Assessment of MOG-Ab positivity by flow cytometry live cell based assay. **A:** MFI of control cell line transduced with an empty vector (LN18-Ctr) and MOG-expressing cells (LN18-MOG) in a dilution series (1:200 – 1:3200) using anti-IgG H+L as secondary antibody. Fluorescence intensity indicates Fluochrom-conjugated anti human MOG-IgG binding to MOG. **B:** Standard curve of MOG-Ab ratios of a reference sample determined in CBA-FACS (CBA ratio at a dilution of 1:3.200 (7.7); 1:1.600 (14.0); 1:800 (30.8); 1:400 (61.0); 1:200 (128.4)). **C:** Normalized CBA-Ratio of a reference sample in a dilution series with 1 at a dilution of 1:3200 set as the cut-off for MOG-Ab positivity (normalized CBA-Ratio at a dilution of 1:3.200 (1.0); 1:1.600 (1.8); 1:800 (4.0); 1:400 (7.9); 1:200 (16.7)). Ratios above 7.9, which correspond to a 1:400 dilution of the reference sample, were considered high antibody titer. **D-F:** MFI of control cell line and MOG-Ab high-positive, borderline and negative sample respectively. MFI: median fluorescence intensity.

Supplementary Table 1: Follow-up Analyses of MOG-Ab positive tested samples

Diagnose	First sample		Follow-up sample MOG-Ab ratio
	MOG-Ab ratio	Intervall	
NMOSD/MOG-AD			
MOG-AD	26.8	470	12.5
MOG-AD	15.7	797	1.4
NMOSD	8.7	659	2.7
Other demyelinating diseases			
Isolated optic neuritis	7.5	353	1.8
Cerebral Infarct			
Stroke (PICA)	5	1067	11.9
Stroke (MCA)	1.9	539	0.84
Stroke (MCA)	1.2	1100	0.7
Others			
Cranial nerve palsy	1.3	1260	1
Polyneuropathy	1.2	1196	0.4

Abbreviations: MCA= Middle cerebral artery; PICA= Posterior inferior cerebellar artery. Interval specified in days. MOG-Ab ratios are displayed as normalized CBA ratio.

Supplementary Table 2: External validation of MOG-Ab ratio

Diagnose	MOG-Ab				
	Lab1		Lab 2	Lab 3	
NMOSD/MOG-AD	IgG H+L	IgG Fc	IgG1		
MOG-AD	pos (26.8)	pos (43.5)	pos (389.06)	pos (1:5.120)	pos (1:3.200)

Polyneuropathy	neg	neg	neg	neg	neg
Dystonia	neg	neg	neg	neg	neg

Samples ordered by level of MOG-Ab ratio by using IgG H+L in Laboratory 1. Cut off values for MOG-Ab positivity of the respective laboratories: Lab 1 MOG-Ab ratio (IgG H+L) ≥ 1 positive; Lab 2 MOG-Ab titer $\geq 1:160$ low positive, $\geq 1:640$ positive; Lab 3: MOG-Ab titer $\geq 1:10$ low positive, $\geq 1:32$ positive. There was lack of material of two samples for re-testing (“no sample”).

Abbreviations: PICA= Posterior inferior cerebellar artery; MCA= Middle cerebral artery; TIA= Transient ischemic attack; PNP= Polyneuropathy. The interpretation of the test result and the ratio and titer (shown in parenthesis for positive samples) are displayed. MOG-Ab in laboratory 1 are displayed as normalized CBA ratio.
