**Fig. S2** Effect of water volume with dosing on (a)  $AUC_{0-6h,SNAC}$  and (b)  $C_{max,SNAC}$  after a single dose of 10 mg oral semaglutide in healthy male subjects.

Bars are estimated means and 95% confidence intervals. Treatment comparisons show estimated treatment ratios [95% confidence interval] and p-value. Endpoints were analyzed on logarithmic scale but are presented on linear scale. n=24 (50 mL) or n=26 (240 mL).  $C_{max}$ , maximum concentration.
