

Figure S1. Representative images of synaptopodin expression (green) during differentiation of podocytes. (A) The synaptopodin expression of podocytes at 37°C in medium without recombinant murine γ -interferon for 2 days. (B) The synaptopodin expression of podocytes at 37°C in medium without recombinant murine γ -interferon for 10 days (scale bar, 50 μ m; magnification, x200).
