

eTable 1. Comparison between subjects in this study vs. cases notified through the NESID system that could not be linked to follow-up data (i.e., cases not included in this study)

		Subjects in this study (n=516)	Cases notified through NESID that could not be linked to follow-up data (n=1,138)	p-value
		n (%)	n (%)	
Gender	Male	285 (55.2%)	615 (54.0%)	0.69
	Female	231 (44.8%)	523 (46.0%)	
Age, years	≥60	263 (51.0%)	579 (50.9%)	0.98
	0–59	253 (49.0%)	559 (49.1%)	
Sign/symptom at time of diagnosis	fever	323 (62.6%)	706 (62.0%)	0.87
	cough	226 (43.8%)	420 (36.9%)	
	severe pneumonia	33 (6.4%)	90 (7.9%)	0.32
