

**1 Kardava et al. Supplementary Materials**

**2 Extended Data Figures 103**

**3 Extended Tables 1-5**

6 **Extended Data Fig. 1. Antibody and cellular assays with validations and correlations.** **a**,  
7 Correlations between serum IgG and IgA binding to RBD (Fig. 1b) and ACE2 inhibition assay  
8 (Fig. 1e) with v2 timepoints shown with color-coding (top panel) or exclusively measurements at  
9 v2D28 (lower panel). **b**, Longitudinal frequencies of RBD<sup>+</sup>S1<sup>+</sup> PB and IgG<sup>+</sup> B cells vaccinees ( $n$   
10 = 21) color-coded as in Fig. 1. **c**, Binding by flow cytometry of S-2P, S1 and RBD trimers to  
11 PB and IgG<sup>+</sup> B cells of an individual at v2D6. **d**, Correlation between flow cytometric and  
12 ELISpot assays measuring frequencies of RBD<sup>+</sup> and S1<sup>+</sup> PB at peak dose 1 and 2 post mRNA-  
13 1273 vaccination. **e**, Average PB isotype distribution measured by flow cytometry in presence or  
14 absence of permeabilization for donors/dose timepoints in **(d)**. Donors **(d,e)** were participants in  
15 protocol NCT00001281 ( $n = 20$ ) and NCT04411147 ( $n = 6$ ). Of the 26 donors, two had prior  
16 SARS-CoV-2 infection (magenta circles in **(d)**). Spearman's rank correlation **(a,d)**. Paired t  
17 test.\*;  $p < 0.05$ ; \*\*;  $p < 0.01$  **(e)**. AU, arbitrary units; D, day; NP, not permeabilized; P,  
18 permeabilized; PB, plasmablasts; RBD, receptor binding domain; S1, spike subunit 1; S-2P,  
19 stabilized spike trimer; v, vaccine dose; V, vaccinees.  
20

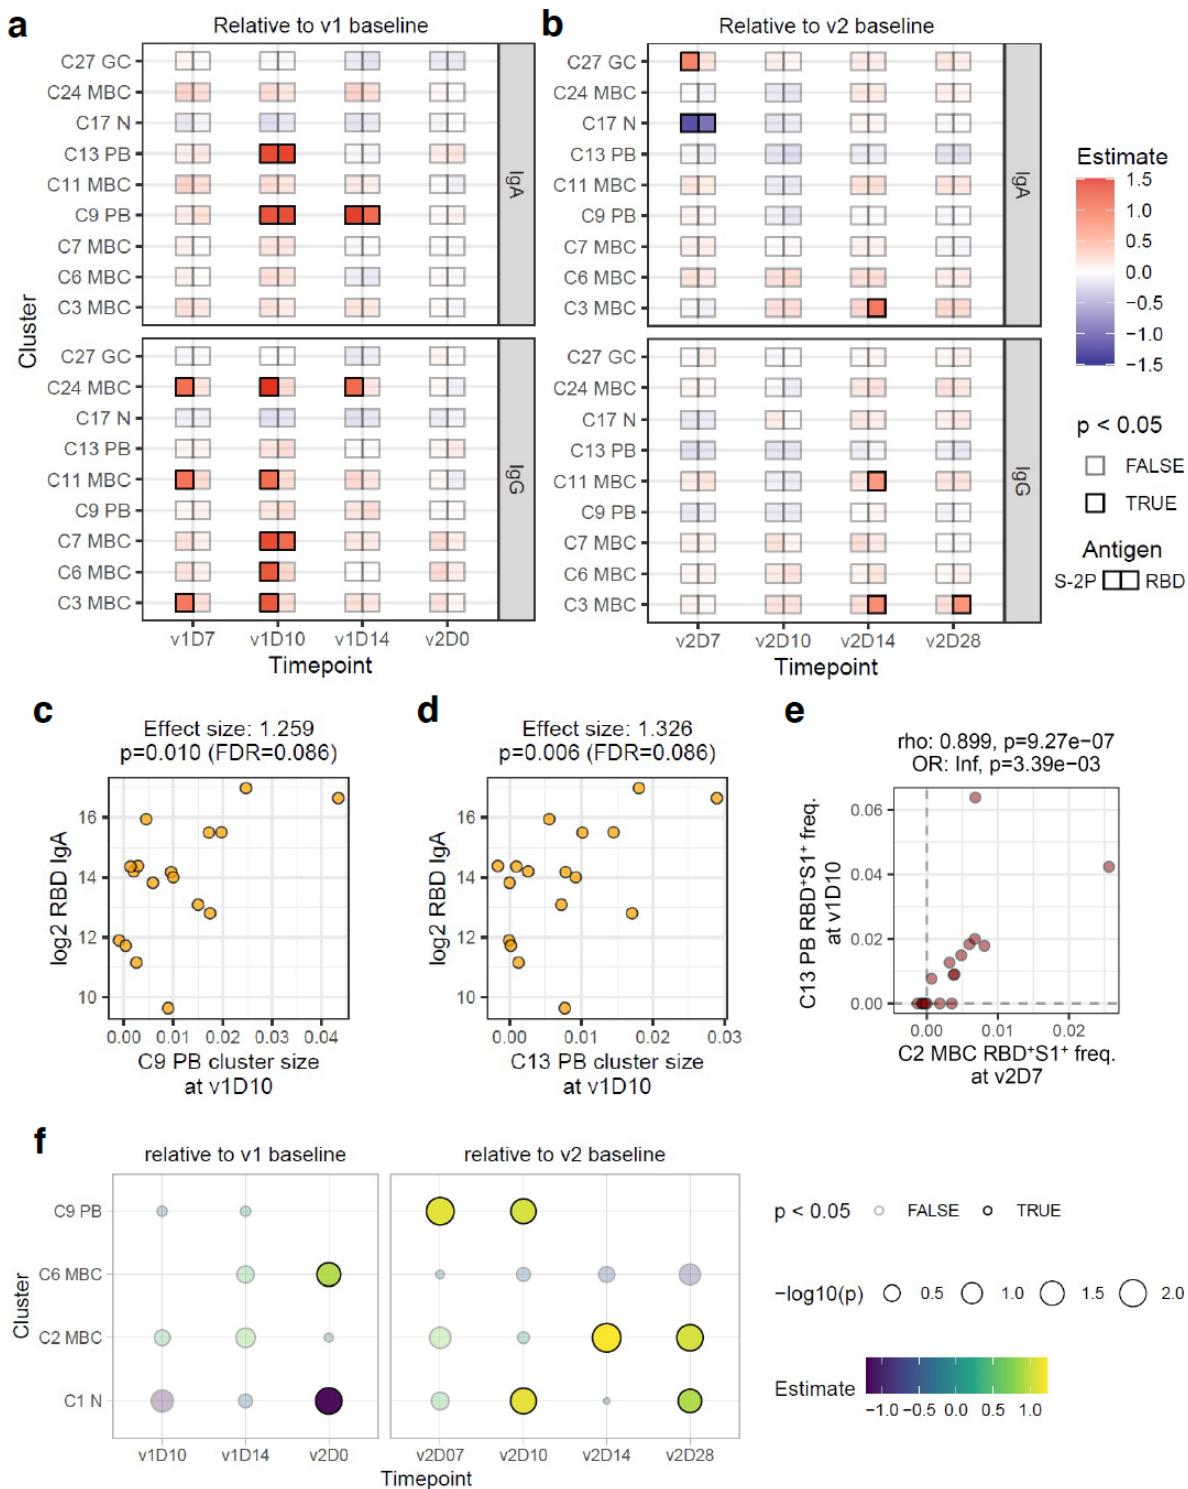

21

22

23 **Extended Data Fig. 2. Uniform Manifold Approximation and Projection (UMAP)**

24 **displaying location of individual cell population clusters.** Similar to Fig. 2a but displaying  
25 annotations of individual clusters.

26

28 **Extended Data Fig. 3. Additional associations between cluster frequencies and endpoint**  
29 **SARS-CoV-2 antibody titers.** **a, b,** Similar to Fig. 4a and b, but for associations with antigen  
30 non-specific cells. **c, d,** Similar to Fig. 4c, but showing association between endpoint RBD IgA  
31 titers and antigen non-specific cells, i.e., cluster size as a fraction of total CD19<sup>+</sup> cell counts,  
32 within C9 (**c**), and C13 (**d**), on v1D10. **e,** Correlation between RBD<sup>+</sup>S1<sup>+</sup> cell frequencies within  
33 C2 on v2D7 and C13 on v1D10. Spearman's correlation coefficients (rho) and unadjusted P  
34 values shown. **f,** Similar to Fig. 4f, but showing association between the first principal  
35 component (PC1) of endpoint SARS-CoV-2 antibody titers and spike-specific RBD<sup>+</sup>S1<sup>+</sup> (double  
36 positive) cell frequencies within each cell cluster. D, day; FDR, false discovery rate; OR, odds  
37 ratio; RBD, receptor binding domain; S1, spike subunit 1; v, vaccine dose.

38

39 **Extended Table 1: Participant information and visits**
