

### **Supplementary Figure 1 Longitudinal evolution of sexual dysfunction in patients with PD over 3 years**

The numbers of sexual dysfunction in patients with PD were decreased from baseline to 3-year (87 to 49), and the occurrence of sexual dysfunction was not persistent. The numbers of persistent sexual dysfunction from baseline, 1-, 2-, and 3-year were 44, 17, and 6, respectively.

**Supplementary Figure 2 Relationship between UPDRS III score and NMS number in patients with PD over 3 years**

The fitted regression line indicated that the UPDRS III score increased with the number of NMS at each visit. Partial correlation with adjustment

for age: baseline ( $r = 0.336$ ,  $P < 0.001$ ); 1-year follow-up ( $r = 0.354$ ,  $P < 0.001$ ); 2-year follow-up ( $r = 0.359$ ,  $P < 0.001$ ); and 3-year follow-up ( $r = 0.330$ ,  $P < 0.001$ ).

Abbreviations: UDPRS, Unified Parkinson's Disease Rating Scale; NMS, non-motor symptoms; PD, Parkinson's disease.
