

Figures

Online Supplementary Figure S1. Flowchart for patient selection.

CNS = central nervous system; DLBCL = diffuse large B-cell lymphoma; MTX-LPD = methotrexate-associated lymphoproliferative disorder.

Online Supplementary Figure S2. Histograms of propensity scores.

A) Original data set. **B)** Matched data set.

Online Supplementary Figure S3. Receiver operating characteristic curves showing c-statistics for propensity scores.

Online Supplementary Figure S4. Kaplan-Meier survival curve of overall survival using the original data set according to the number of cycles of regimens.

Number at risk:

6 cycles	191	132	80	49	25	9	4	0
8 cycles	180	137	103	68	40	24	10	1

Online Supplementary Figure S5. Time-varying Kaplan-Meier survival curve of overall survival using the matched data set according to the number of cycles of regimens.

Online Supplementary Figure S6. Covariate-adjusted Cox hazards model with restricted cubic spline with three knots showing the association between tARDI and overall survival according to the number of cycles of regimens using the original data set.

Solid line represents log hazard ratio. Shaded area is the 95% confidence interval.

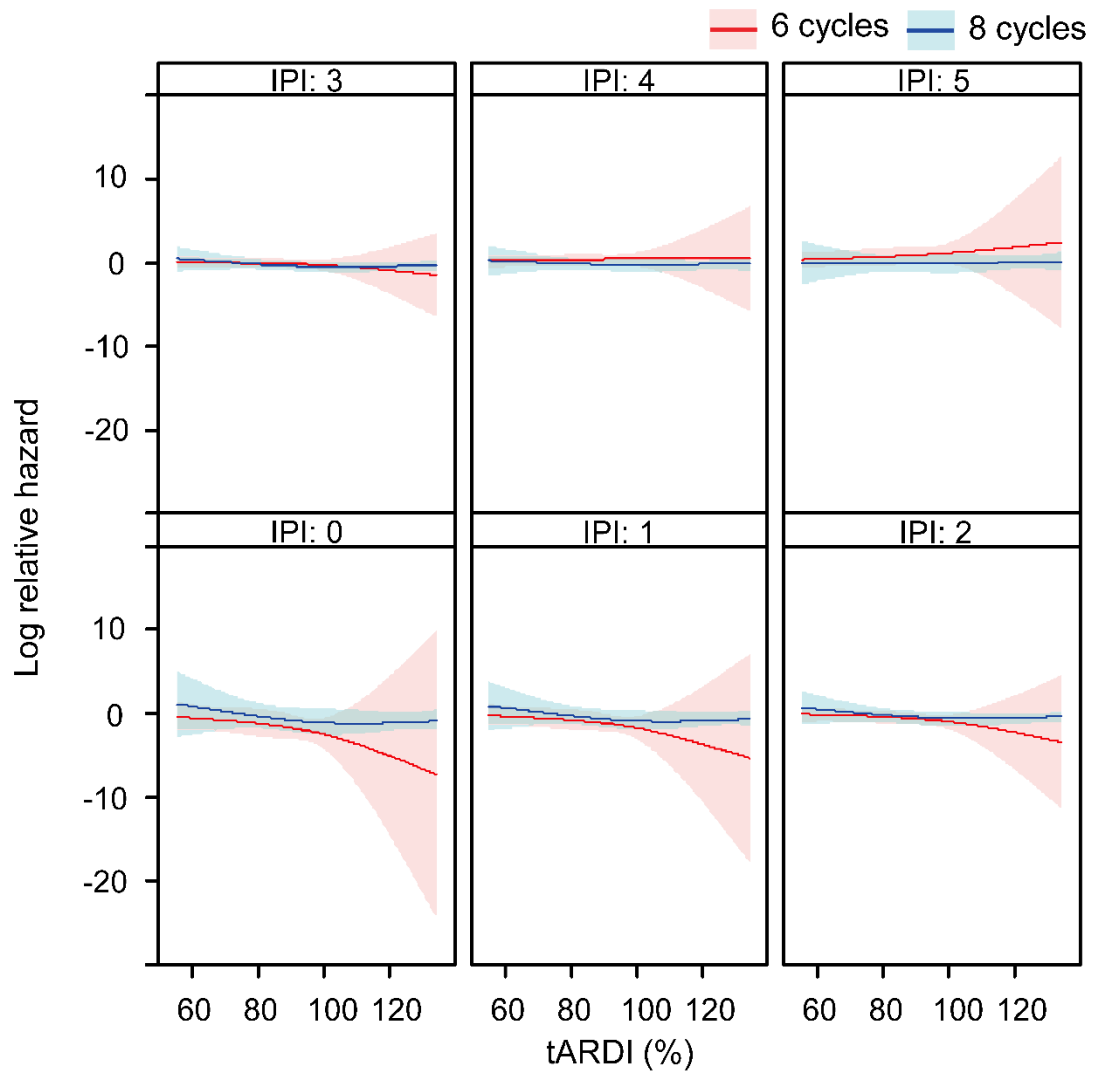

tARDI = total average relative dose intensity.

Online Supplementary Figure S7. Covariate-adjusted Cox hazards model with restricted cubic spline with three knots showing the association between age and overall survival according to the number of cycles of regimens using the original data set.

Solid line represents the log hazard ratio. Shaded area is the 95% confidence interval.

Online Supplementary Figure S8. Covariate-adjusted Cox hazards model with restricted cubic spline with three knots showing associations between tARDI and overall survival of six groups divided by each score of the IPI using the matched data set.

Solid line represents the log hazard ratio. Shaded area is the 95% confidence interval.

IPI = International Prognostic Index; tARDI = total average relative dose intensity.

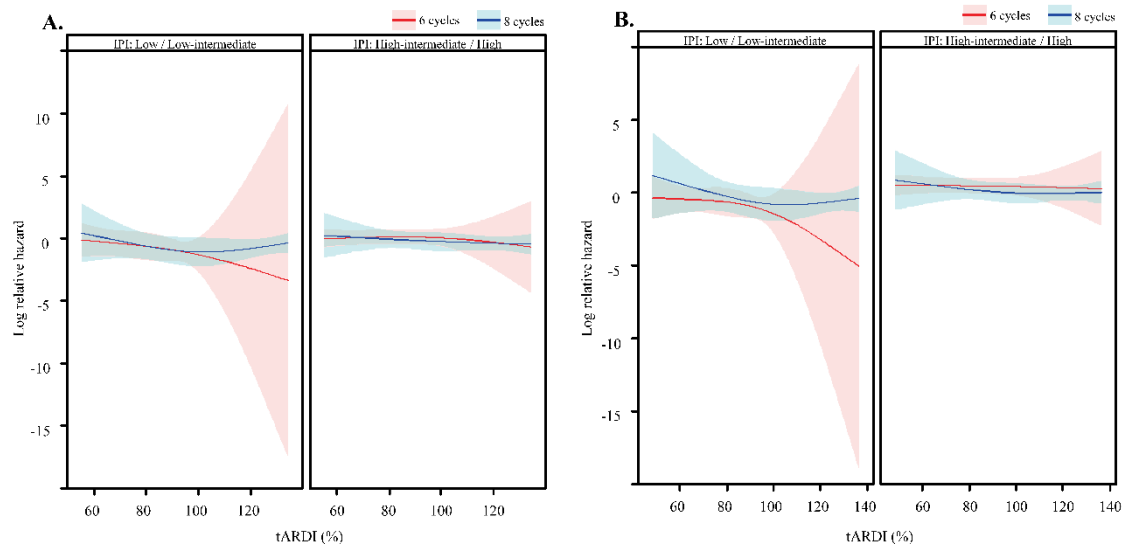

Online Supplementary Figure S9. Covariate-adjusted Cox hazards model with restricted cubic spline with three knots showing associations between tARDI and overall survival of six groups divided by each score of the IPI using the original data set.

Solid line represents the log hazard ratio. Shaded area is the 95% confidence interval.

IPI = International Prognostic Index; tARDI = total average relative dose intensity.

Online Supplementary Figure S10. Covariate-adjusted Cox hazards model with restricted cubic spline with three knots showing associations between tARDI and overall survival for binary groups divided by IPI (<3 versus ≥3).

Solid line represents log hazard ratio. Shaded area is the 95% confidence interval. **A)** Matched data set. **B)** Original data set. IPI = International Prognostic Index; tARDI = total average relative dose intensity.

Online supplementary table 1. Patient characteristics at diagnosis before propensity score matching.

	All patients		Six cycles of standard regimens		Eight cycles of standard regimens		<i>P</i> value	Survivor		Non-survivor		<i>P</i> value
