List of Content

Table S1. Isolates obtained, re-sequenced and used in the phylogenetic analyses in this study.....	4–24
Table S2. Isolates and sequences from previous studies used in this study.....	25–31
Table S3. Statistics resulting from phylogenetic analyses in this study.....	32
Table S4. Morphological characteristics, thallism and location of ex-types of <i>Calonectria</i> species.....	33–39
Table S5. Identification success rates based on phylogenetic analyses for separate and combined DNA barcodes.....	40–41
Supplementary Fig. S1. Phylogenetic tree of the genus <i>Calonectria</i> based on maximum likelihood (ML) analyses of <i>act</i> gene region. Codes A1 to A169 showed the 169 <i>Calonectria</i> species before their taxonomic reconsideration in this study, codes B1 to B120 indicated the 120 accepted <i>Calonectria</i> species after the revision emerging from this study. Bootstrap values $\geq 80\%$ for ML and MP analyses are presented at the branches. Bootstrap values lower than 80 % are marked with “*”, and absent analyses values are marked with “-”. Ex-type isolates of <i>Calonectria</i> species after revision, are marked with “T”. The tree is rooted to <i>Curviciadiella cignea</i> (CBS 109167, and CBS 109168).....	42–45
Supplementary Fig. S2. Phylogenetic tree of the genus <i>Calonectria</i> based on maximum likelihood (ML) analyses of <i>cmdA</i> gene region. Codes A1 to A169 showed the 169 <i>Calonectria</i> species before their taxonomic reconsideration in this study, codes B1 to B120 indicated the 120 accepted <i>Calonectria</i> species after the revision emerging from this study. Bootstrap values $\geq 80\%$ for ML and MP analyses are presented at the branches. Bootstrap values lower than 80 % are marked with “*”, and absent analyses values are marked with “-”. Ex-type isolates of <i>Calonectria</i> species after revision, are marked with “T”. The tree is rooted to <i>Curviciadiella cignea</i> (CBS 109167, and CBS 109168).....	46–49
Supplementary Fig. S3. Phylogenetic tree of the genus <i>Calonectria</i> based on maximum likelihood (ML) analyses of <i>his3</i> gene region. Codes A1 to A169 showed the 169 <i>Calonectria</i> species before their taxonomic reconsideration in this study, codes B1 to B120 indicated the 120 accepted <i>Calonectria</i> species after the revision emerging from this study. Bootstrap values $\geq 80\%$ for ML and MP analyses are presented at the branches. Bootstrap values lower than 80 % are marked with “*”, and absent analyses values are marked with “-”. Ex-type isolates of <i>Calonectria</i> species after revision, are marked with “T”. The tree is rooted to <i>Curviciadiella cignea</i> (CBS 109167, and CBS 109168).....	50–53
Supplementary Fig. S4. Phylogenetic tree of the genus <i>Calonectria</i> based on maximum likelihood (ML) analyses of ITS region. Codes A1 to A169 showed the 169 <i>Calonectria</i> species before their taxonomic reconsideration in this study, codes B1 to B120 indicated the 120 accepted <i>Calonectria</i> species after the revision emerging from this study. Bootstrap values $\geq 80\%$ for ML and MP analyses are presented at the branches. Bootstrap values lower than 80 % are marked with “*”, and absent analyses values are marked with “-”. Ex-type isolates of <i>Calonectria</i> species after revision, are marked with “T”. The tree is rooted to <i>Curviciadiella cignea</i> (CBS 109167, and CBS 109168).....	54–57

- Supplementary Fig. S5.** Phylogenetic tree of the genus *Calonectria* based on maximum likelihood (ML) analyses of LSU region. Codes A1 to A169 showed the 169 *Calonectria* species before their taxonomic reconsideration in this study, codes B1 to B120 indicated the 120 accepted *Calonectria* species after the revision emerging from this study. Bootstrap values $\geq 80\%$ for ML and MP analyses are presented at the branches. Bootstrap values lower than 80 % are marked with “*”, and absent analyses values are marked with “-”. Ex-type isolates of *Calonectria* species after revision, are marked with “T”. The tree is rooted to *Curvicoladiella cignea* (CBS 109167, and CBS 109168).....58–61
- Supplementary Fig. S6.** Phylogenetic tree of the genus *Calonectria* based on maximum likelihood (ML) analyses of *rpb2* gene region. Codes A1 to A169 showed the 169 *Calonectria* species before their taxonomic reconsideration in this study, codes B1 to B120 indicated the 120 accepted *Calonectria* species after the revision emerging from this study. Bootstrap values $\geq 80\%$ for ML and MP analyses are presented at the branches. Bootstrap values lower than 80 % are marked with “*”, and absent analyses values are marked with “-”. Ex-type isolates of *Calonectria* species after revision, are marked with “T”. The tree is rooted to *Curvicoladiella cignea* (CBS 109167, and CBS 109168).....62–65
- Supplementary Fig. S7.** Phylogenetic tree of the genus *Calonectria* based on maximum likelihood (ML) analyses of *tef1* gene region. Codes A1 to A169 showed the 169 *Calonectria* species before their taxonomic reconsideration in this study, codes B1 to B120 indicated the 120 accepted *Calonectria* species after the revision emerging from this study. Bootstrap values $\geq 80\%$ for ML and MP analyses are presented at the branches. Bootstrap values lower than 80 % are marked with “*”, and absent analyses values are marked with “-”. Ex-type isolates of *Calonectria* species after revision, are marked with “T”. The tree is rooted to *Curvicoladiella cignea* (CBS 109167, and CBS 109168).....66–69
- Supplementary Fig. S8.** Phylogenetic tree of the genus *Calonectria* based on maximum likelihood (ML) analyses of *tub2* gene region. Codes A1 to A169 showed the 169 *Calonectria* species before their taxonomic reconsideration in this study, codes B1 to B120 indicated the 120 accepted *Calonectria* species after the revision emerging from this study. Bootstrap values $\geq 80\%$ for ML and MP analyses are presented at the branches. Bootstrap values lower than 80 % are marked with “*”, and absent analyses values are marked with “-”. Ex-type isolates of *Calonectria* species after revision, are marked with “T”. The tree is rooted to *Curvicoladiella cignea* (CBS 109167, and CBS 109168).....70–73

Table S1. Isolates obtained, re-sequenced and used in the phylogenetic analyses in this study.

Code A ¹	Previous species name ²	Isolates numbers ^{3,4,5}	Other collection number ³	Code B ⁶	Accepted species name ⁷	Isolates after species revision ^{8,9}	Hosts	Area of occurrence	Collector	GenBank accession Numbers ¹⁰	References or source of data

¹Codes (A1 to A169) of the 169 *Calonectria* species before revision.

²*Calonectria* species names before revision.

³AR: Amy Y. Rossman working collection; ATCC: American Type Culture Collection, Virginia, USA; CBS: Westerdijk Fungal Biodiversity Institute, Utrecht, The Netherlands; CERC: China Eucalypt Research Centre, ZhanJiang, GuangDong Province, China; CMW: Culture collection of the Forestry and Agricultural Biotechnology Institute (FABI), University of Pretoria, Pretoria, South Africa; CPC: Pedro Crous working collection housed at Westerdijk Fungal Biodiversity Institute; HGUP: Plant Pathology Herbarium of Gui Zhou University, GuiYang 550025, China; IMI: International Mycological Institute, CABI Bioscience, Egham, Bakeham Lane, UK; LPF: Laboratorio de Patologia Florestal, Universidade Federal de Viçosa, Viçosa, Brazil; MUCL: Mycotheque, Laboratoire de Mycologie Systematique et Appliquée, l'Universite, Louvian-la-Neuve, Belgium; PPRI: Plant Protection Research Institute, Pretoria, South Africa; STE-U: Department of Plant Pathology, University of Stellenbosch, South Africa; UFV: Universidade Federal de Viçosa, Viçosa, Brazil.

⁴Re-sequenced isolates were obtained from culture collections of CBS, CMW and CERC, and the isolate numbers were appeared in the phylogenetic trees in this study.

⁵T: ex-type isolates of the *Calonectria* species before revision.

⁶Codes (B1 to B120) of the 120 *Calonectria* species after revision.

⁷The 120 *Calonectria* species after revision, species link to the key isolates including the ex-types are in bold.

⁸Key isolates of the 120 *Calonectria* species after revision

⁹T: ex-type isolates of the *Calonectria* species after revision.

¹⁰*act*: actin; *cmdA*: calmodulin; *his3*: histone H3; *ITS*: the internal transcribed spacer regions 1 and 2 and the 5.8S gene of the ribosomal RNA; *LSU*: 28S large subunit RNA gene; *rpb2*: the second

largest subunit of RNA polymerase; *tef1*: translation elongation factor 1-alpha; *tub2*: β -tubulin.

¹¹N/A: information are not available.

^{*}Species were synonymized.

[#]Species names after synonymizing.

[&]Species name after re-identification.

Table S2. Isolates and sequences from previous studies used in this study.

Code A ¹	Previous species name ²	Isolates number ^{3,4}	Other collection number ³	Code B ⁵	Accepted species name ⁶	Isolates after species revision ^{7,8}	Hosts	Area of occurrence	Collector	GenBank accession Numbers ⁹	References

A14	B106	<i>Ca. baviensis</i>	Narrowly clavate	3–6	5	96 × 6.5	N/A	N/A	N/A	Putative heterothallic	Asia, Vietnam	Pham <i>et al.</i> (2019), Li <i>et al.</i> (2020)	
11. <i>Calonectria spathiphylli</i> species complex													
A38	B33	<i>Ca. densa</i>	Ovoid to ellipsoidal to sphaeropedunculate	10–12	1	54 × 6	N/A	N/A	N/A	Putative heterothallic	South America, Ecuador	Lombard <i>et al.</i> (2010a), Li <i>et al.</i> (2020)	
A62	B49	<i>Ca. humicola</i>	Globose to ovoid to sphaeropedunculate	10–12	1	51 × 5	N/A	N/A	N/A	N/A	South America, Ecuador	Lombard <i>et al.</i> (2010a)	
A130	B98	<i>Ca. pseudospathiphylli</i>	Sphaeropedunculate to ellipsoidal	8–12	1(–3)	52 × 4	Orange to red	8	1(–3)	42 × 5.5	Homothallic	South America, Ecuador	Kang <i>et al.</i> (2001b), Crous (2002)
A145	B110	<i>Ca. spathiphylli</i>	Globoid or ellipsoidal to obpyriform	8–15	1(–3)	70 × 6	Orange to red	2–8	1(–3)	45 × 5	Heterothallic	North America, USA	El-Gholl <i>et al.</i> (1992), Crous (2002)

¹A: Represent the codes of the 169 *Calonectria* species before revision.

²B: Represent the codes of the 120 *Calonectria* species after revision.

³Synonymous species were marked in bold and blue, and the * indicated the species after synonymy.

⁴Vesicle shape within *Calonectria* genus were mainly divided into six categories and marked in different colour: clavate or narrowly clavate vesicle/light green, naviculate vesicle/green, ellipsoidal to obpyriform vesicle/dark green, ellipsoidal vesicle with papillate apex/yellow, sphaeropedunculate vesicle/orange; species complexes with varied vesicle shapes were not marked in any colour.

⁵Macroconidial septation within *Calonectria* genus were divided into three categories and marked in three colour: 1-septate/light green, 3-septate/green, > 3-septate/dark green.

⁶Perithecia colour within *Calonectria* genus were mainly divided into two categories and marked in two colour: orange to red-brown perithecia/light green, yellow perithecia/green.

⁷Number of ascospores produced in ascus within *Calonectria* genus were mainly divided into three categories and marked in different colour: 4-spored asci/light green, 8-spored asci/green, not 4-spored or 8-spored asci were not marked in any colour.

⁸Ascospores septation within *Calonectria* genus were mainly divided into three categories and marked in three colour: 1-septate/light green, 3-septate/green, > 3-septate/dark green.

⁹The ex-type isolates of *Calonectria* spp. collected from six continents were marked in six different colour: Africa/light green, Asia/green, Europe/dark green, North America/yellow, Oceania/orange, South America/dark orange.

¹⁰The mating system of *Calonectria* spp. were marked in two colour: heterothallic or putative heterothallic/light green, homothallic/green.

¹¹N/A: information are not available.

Table S5. Identification success rates based on phylogenetic analyses for separate and combined DNA barcodes.

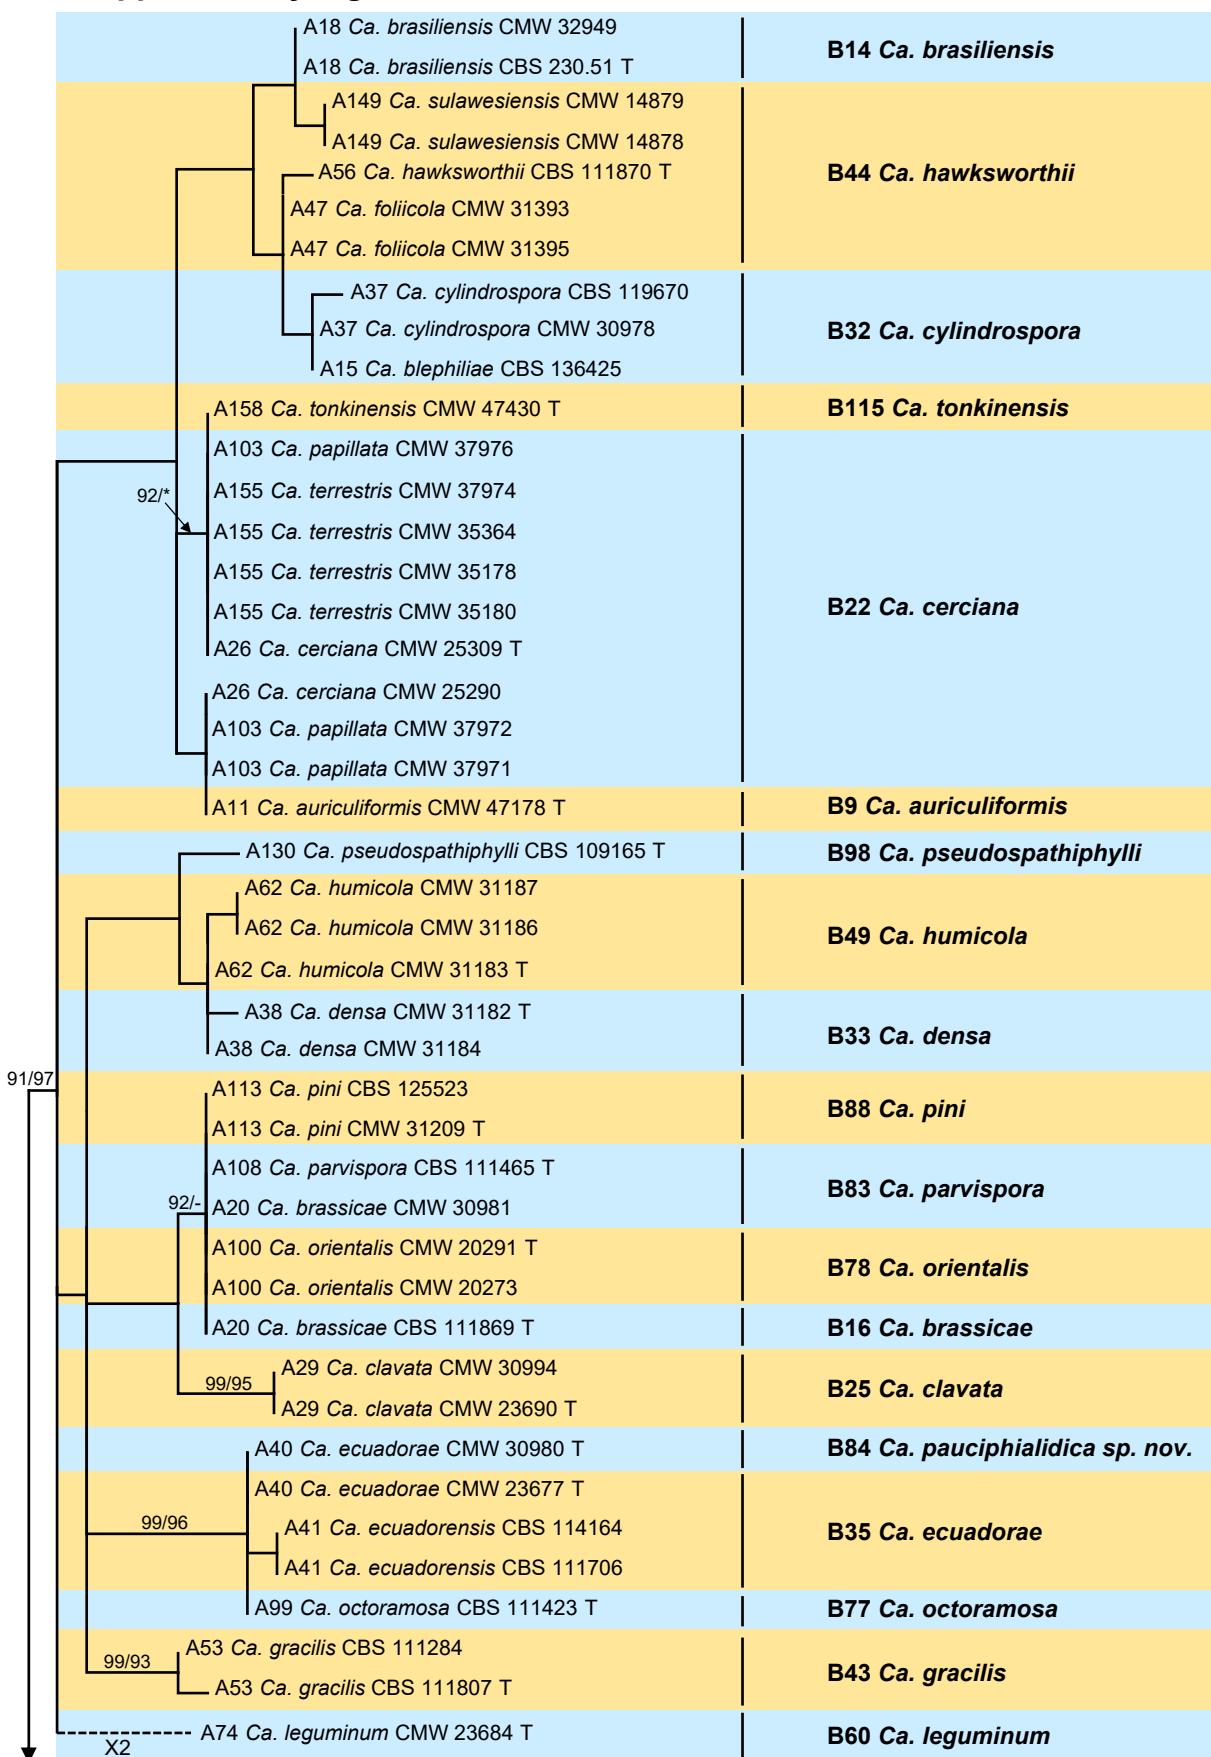

Genus or species complex	Genus or species complex name	Species numbers and Identification success rates	Combination of eight genes ¹		Each of eight DNA barcodes ²
