

**Supplemental Figure S2.**

Variability of  $\text{FiO}_2$  at the 30 and 36 weeks, in all infants (orange circles), infants without BPD (blue squares), and infants with BPD (red triangles). Box plot lines represent the median and interquartile ranges, and error bars represent maximum and minimums. There was no statistically significant difference in  $\text{FiO}_2$  at 30 weeks or 36 weeks PMA between infants with or without BPD.
