

Supplementary Figure 1. Mitochondrial transfer through MSC-EVs to Human Precision Cut Lung Slices (PCLSs). Representative confocal images of MSC-EVs mitochondria transfer in PCLSs. PCLSs were stimulated with LPS and treated with PBS, MSCs pre-stained with MitoTracker Deep Red FM or MSC-EVs-Rho for 24 hours to allow EVs uptake. The images were taken using the Leica SP8-Upright Confocal microscopy (scale bars 50 μ m).
