

Supplementary information

S Figure 1: No difference in PSM induced lyses between human and murine neutrophils. Dose-dependent neutrophil lysis induced by synthetic PSMα3. Neutrophils were isolated from healthy human donors or murine bone marrow. Neutrophil lysis was measured via LDH release. Data represent means ± SEM of three independent experiments.

S Figure 2: Peritoneal cells isolated from C57BL/6 or LCAT^{-/-} mice produce equal amount of pro-inflammatory cytokines in response to stimulation with PSM. *In vitro* stimulation of peritoneal lavage cells isolated from C57BL/6 or LCAT^{-/-} mice with LPS (50ng/ml) or synthetic PSM α 3. Levels of IL-1 β and KC were measured by ELISA. Each dot represents an individual mouse, data compiled from 2 individual experiments.
