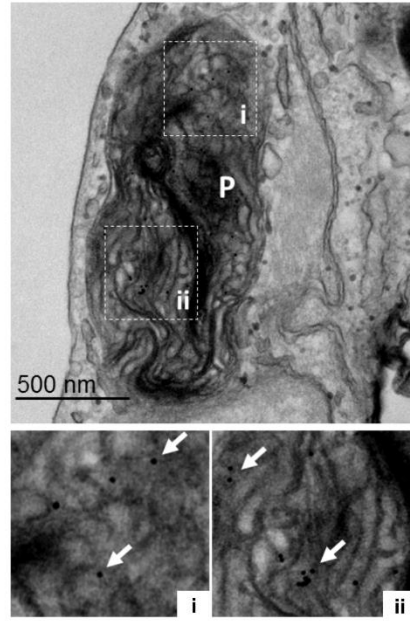

Figure S4

Figure S4. POS phagocytosis tracking by gold loaded POS with TEM.

Representative images of conventional EM of pRPE pulsed for 4h with POS tagged with 10nm gold colloid. **(A)** At the end of the pulse, POS on the cell surface (pre-internalization) are clearly tagged with gold indicated by the arrows. **(B)** 4h post-pulse, phagosomes within the RPE are also identifiable by the presence of gold.
