

Raw pictures for Figure 5A

Three raw gel images used in Figure 5A are attached below:

Proteins in each samples: perforin only

Capture method: Odyssey CLx scanner

Molecular weight markers and loading order have been annotated without obscuring any data or background bands.

Raw pictures for Figure 5C

Three raw gel images used in Figure 5C are attached below:

Proteins in each samples: perforin only

Capture method: Odyssey CLx scanner

Molecular weight markers and loading order have been annotated without obscuring any data or background bands.

Raw pictures for Figure S9

Raw and annotated gel images used in Figure S9 are attached below:

Samples: cell lysates

Capture method: Odyssey CLx scanner

Molecular weight markers and loading order have been annotated without obscuring any data or background bands.
