**Table S1** Conditions tested to optimize the synthesis of AgNPs in the presence of calixarene C1. The term “monodisperse” describes nanoparticles that show, after synthesis and cleaning, a strong and intense LSPR band with a  $A_{420nm}/A_{600nm}$  ratio higher than 15. The term “ultra-stable” describes nanoparticles that can endure multiple pH variation cycles without degrading and exposure to 150 mM of KF for 45 minutes without loss of absorbance (i.e. 5% or less).
