

Figure S1 The expression levels of TLEs in TCGA of patients with LUAD in paired normal and tumor tissues. The x-axis represents the sample type; the y-axis represents the TLE expression level. The different expression levels of TLE 1–7 in normal (n=57) and tumor (n=57) tissues. TLE, Transducin-like Enhancer of split; TCGA, The Cancer Genome Atlas; LUAD, lung adenocarcinoma.

Figure S2 A model illustrating the relationship between the TLE family members and the Wnt pathway. TLE, Transducin-like Enhancer of split.
