Appendix

Appendix Figure S1 No T cell immunostimulatory effect of BHB.

Appendix Figure S2 No nonspecific immune stimulation through ketogenic diet *in vivo*.

Appendix Table 1: qRT-PCR Primer and Probes

Appendix Figure S1 No T cell immunostimulatory effect of BHB.

Human peripheral blood mononuclear cells (PBMCs) were cultivated for 48h in RPMI containing 80mg/dl glucose (NC) and supplemented with 2mM, 5mM and 10mM (Figure S1a/b/e) or only 10mM beta-hydroxybutyrate (BHB | all others). Human whole blood cells were incubated at 37°C for three hours and supplemented with 10mM BHB. **A** Expression of IL2, IFN γ and GZMB mRNA relative to endogenous controls. T cell stimulation was performed through CD3/CD28 Dynabeads at a bead:cell ratio of 1:8. Human pan T cell RNA was isolated after 48 hours, n=5 biological replicates. **B** Flow cytometric quantification of intracellular IFN γ and GZMB protein expression in human Pan T cells cultivated with varying concentrations of BHB as indicated. T cell stimulation as described above. Histogram plot, representative of three individual experiments from three biological replicates. **C** mRNA expression of CD4⁺ cytokines IL2, IL4, IL10, TGF β 1 and Foxp3 in native human T cells relative to internal controls, n=6/7/9/6/8 biological replicates. **D** mRNA expression of CD8⁺ cytokines IFN γ , GZMB and PRF1 in native human T cells relative to internal controls. n=9/8/8 biological replicates. **E** Th₁/Th₂ cell transcription factors Tbet and GATA3 quantified via RT-qPCR in human Pan T cells cultivated with varying concentrations of BHB as indicated and the respective ratio of fold induction Tbet/GATA3 mRNA expression, n=6 biological replicates. **F** Phagocytic activity in human granulocytes and monocytes incubated with green E. coli, indicated by mean fluorescence intensity (MFI) FITC, n=6 biological replicates. **G** Quantification of cellular Respiratory Burst after LPS stimulation, using CellROX dye, indicated by mean fluorescence intensity (MFI) FITC in human granulocytes, n=6 biological replicates. **H** IL1 β protein expression in the supernatant of stimulated PBMCs, n=13 biological replicates. **I** Representative gating strategy for flow cytometric quantification of human T_{reg} after 5 days of T_{reg} differentiation. Data depicted as mean \pm SEM (protein data) and box plots with median, twenty-fifth and seventy-fifth percentiles and range (all other). Dots indicating individual values. *p<0.05, **p<0.01, ***p<0.001, paired t-test/ Wilcoxon matched-pairs signed rank test, as appropriate.

Appendix Figure S2 No nonspecific immune stimulation through ketogenic diet *in vivo*.

44 healthy volunteers conducted a three-week ketogenic diet (KD) with a limited carbohydrate consumption of <30g per day. Blood was taken and analyzed before starting the diet (T_0) and again after three weeks of strict adherence to the diet (T_1). PBMCs were isolated. CD4⁺/CD8⁺ T cells were separated via magnetic cell labeling. **A** IL2, IL4 and CTLA4 mRNA expression in unstimulated CD4⁺ T cells, n=20 individual human subjects. Quantification cycles for IL10 have been above the detection threshold. **B** IFN γ , GZMB, PRF1 and CTLA4 mRNA expression in unstimulated CD8⁺ T cells, n=20 individual human subjects. **C** Ratio of fold induction Tbet/GATA3 mRNA expression in vitro (BHB/NC) and in vivo (T_1/T_0), n=6. Data depicted as mean with standard error mean (S2c) or box plots with median, twenty-fifth and seventy-fifth percentiles and range (all other). Dots indicating individual values. Unpaired t-test (Figure S2c), Paired t-test/ Wilcoxon matched-pairs signed rank test, as appropriate.
