Title: Searching for alternatives to brain regeneration

Reviewer's Name: Gopi Margabandhu

Reviewer's country: India

COMMENTS TO AUTHORS

This paper was well written about searching for alternatives to brain regeneration through standard neuroscientific terms. Congratulations to author.

The author described an interesting perspective about the searching for alternatives to brain regeneration. They verified more positive effects of neurogenesis and also huge number of questions with answer from neurogenesis to brain plasticity. Few innovative points of this manuscript.

1. Initially, provided that stem cell driven and brain plasticity was quite better and reference also good.
2. Fig. 1 was well drafted and legends around synaptic plasticity in mammalian brain.
