CONCERT-HF Stage 1 Summary Report

The CONCERT-HF protocol was conducted in two stages; an open label lead-in investigation (Stage 1) followed by a randomized controlled trial (Stage 2). The open label lead-in investigation consisted of 18 subjects randomized 1:1 to either a standard of care (SOC) control group (i.e., subjects did not undergo harvest, mapping, or injection procedures) or to the combination cell therapy group (mesenchymal stromal cells [MSCs] + c-kit positive cardiac cells [CPCs]). All subjects were followed for 3 months to complete safety and functional assessments. The resulting three-month data were reviewed by the NHLBI's Gene and Cell Therapy Data and Safety Monitoring Board (DSMB) prior to initiation of Stage 2 (n=125).

Enrollment

The first participant was enrolled on October 31, 2015. Twenty-seven participants were consented/enrolled in the CONCERT-HF Lead-in, and 18 successfully completed baseline testing and randomization, 9 to MSCs+CPCs therapy and 9 to SOC. Successful harvest procedures took place in 6 of the 9 treated participants; one participant suffered a stroke prior to harvest (reported to the DSMB in January 2016); one participant died from complications during the endomyocardial biopsy (EMB) procedure (reviewed on teleconference with DSMB in April 2016), and one participant's harvest procedures were cancelled because they were scheduled after the DSMB placed a hold on EMB procedures. Of the remaining 6 treated participants, 5 had successful growth of both cell types and successful study product injection by NOGA; one failed to meet the release criteria for minimum dose of CPCs and thus did not get study product injection. Of the nine participants randomized to SOC, one withdrew consent and one received an LVAD before the three-month endpoint. Thus, 8 SOC and 5 MSCs+CPCs participants were followed for the endpoints of CONCERT-HF lead-in. A full report of the Lead-in Phase (Stage 1) data was submitted to the DSMB on November 7, 2016 and subsequently forwarded to the Food and Drug Administration under our IND 16399. The final Stage 1 follow-up study visits were completed in July 2017. Final adverse event reporting concluded at the September 2017 DSMB meeting.

Baseline Characteristics

Eighteen participants were randomized during the lead-in phase, 9 to MSCs+CPCs therapy and 9 to SOC. No statistically significant differences were seen in baseline characteristics between the treated and SOC groups. The 9 participants randomized to the MSCs+CPCs group had an average age of 62 years, weight 92.5 kg, BMI 31, and blood pressure (BP) 120/71 mmHg; the 9 participants in the SOC group had an average age of 57 years, weight 97.1 kg, BMI 33, and BP 114/67 mmHg. Though also not statistically significant, 4 participants in the SOC group had previous hospitalizations compared with none in the treated group ($p=0.082$); 6 participants in the treated group had a history of diabetes compared with 3 in the SOC group ($p=0.347$); and 7 participants in the treated group were on ACE inhibitors compared with 2 in the SOC group ($p=0.057$). In addition, 7 participants in each group had an implantable cardiac device.

Adverse events

The tables below are provided for reference. There were 12 adverse events (AEs), of which nine were serious and reported to the DSMB.

Serious Adverse Events

Subject ID	Acrostic	Date of Treatment (SPI)	Date of SAE	Description (MedDRA preferred terms)	Expectedness	Severity or Grade	Relationship to Study Product	Relationship to Study Procedure	Outcome
03-5002-03	FREJO	No SPI	12/8/2015	Haemorrhagic transformation stroke	Expected	Grade 3 - Severe	Unrelated	Not related to study procedure	Resolved or stabilized with sequelae
03-5002-03	FREJO	No SPI	12/8/2015	Acute myocardial infarction	Expected	Grade 3 - Severe	Unrelated	Not related to study procedure	Resolved or stabilized with sequelae
02-5003-02	JAMARR	No SPI	3/31/2016	Cardiac perforation	Expected*	Grade 5 - Death	Definitely related	Endomyocardial Biopsy Harvest	Death: death due to AE
07-5040-07	SALMI	No SPI	4/18/2016	Cardiac failure	Expected	Grade 3 - Severe	Unrelated	Not related to study procedure	Resolved or stabilized without sequelae
07-5040-07	SALMI	No SPI	5/9/2016	Cardiac failure congestive	Expected	Grade 3 - Severe	Unrelated	Not related to study procedure	Resolved or stabilized with sequelae
03-5021-03	PARSH	No SPI	4/13/2016	Cardiac failure congestive	Expected	Grade 3 - Severe	Unrelated	Not related to study procedure	Resolved or stabilized without sequelae
03-5021-03	PARSH	No SPI	4/13/2016	Intracardiac thrombus	Expected	Grade 3 - Severe	Unrelated	Not related to study procedure	Resolved or stabilized without sequelae
07-5040-07	SALMI	No SPI	5/17/2016	Cardiac failure congestive	Expected	Grade 4 - Life Threatening or Disabling	Unrelated	Not related to study procedure	Resolved or stabilized with sequelae
07-5040-07	SALMI	No SPI	6/20/2016	Cardiac failure congestive	Expected	Grade 4 - Life Threatening or Disabling	Unrelated	Not related to study procedure	Resolved or stabilized with sequelae

* Per the FDA, similar events (should they occur in the future) would best be characterized as unexpected

Other adverse events

Subject ID	Acrostic	Date of Treatment (SPI)	Date of AE	Description (MedDRA preferred terms)	Expectedness	Severity or Grade	Relationship to Study Product	Relationship to Study Procedure	Outcome
03-5006-03	GALRI	No SPI	4/1/2016	Cardiac failure acute	Expected	Grade 2 - Moderate	Unrelated	Not related to study procedure	Resolved or stabilized without sequelae
07-5042-07	MARSTJ	No SPI	6/18/2016	Epistaxis	Unexpected	Grade 2 - Moderate	Unrelated	Not related to study procedure	Resolved or stabilized without sequelae
07-5002-07	SALPAF	6/23/2016	6/23/2016	Abdominal pain	Expected	Grade 2 - Moderate	Unlikely	Study Product Injection	Resolved or stabilized without sequelae

There were no events attributed to the SPI, and total events reported do not differ significantly between the two groups for either the SAEs or AEs. In summary, the safety profile surrounding the SPI is excellent, and the Network accepted the guidance of the DSMB to eliminate the biopsy for the untreated participants in the placebo and MSCs only groups.

LV Function and Functional Status

The table below includes measures assessed at baseline and 3 months post treatment to explore changes over time in those receiving the MSCs + CPCs (Combo) versus those receiving SOC.

Of the nine patients randomized to the MSCs + CPCs group, four were excluded from the primary analysis (one withdrew due to an SAE prior to harvest, one died, one harvest was canceled due to DSMB hold, and one was unable to get the Month 3 data due to a weather event); also the subject whose cells failed to grow did not have the Month 3 MRI or CPET exams. Of the nine patients randomized to the SOC group, one withdrew consent and was excluded from the primary analysis; also one subject received an LVAD and did not receive the Month 3 MRI, CPET or 6MWT.

Supplemental Table 1. Inclusion and Exclusion Criteria

Inclusion Criteria

To participate, a patient **MUST**:

- Be ≥ 21 and <80 years of age
 - Have documented coronary artery disease with evidence of myocardial injury, LV dysfunction, and clinical evidence of HF
 - Have a “detectable” area of myocardial injury defined as $\geq 5\%$ LV involvement (infarct volume) and any subendocardial involvement by cMRI
 - Have an EF $\leq 40\%$ by cMRI
 - Be receiving guideline-driven medical therapy for heart failure at stable and tolerated doses for ≥ 1 month prior to consent
 - Be a candidate for cardiac catheterization
 - Have NYHA class I, II or III heart failure symptoms
 - If a female of childbearing potential, be willing to use one form of birth control for the duration of the study, and undergo a pregnancy test at baseline and within 36 hours prior to injection
-

Exclusion Criteria

To participate, a patient **MUST NOT HAVE**:

- Indication for standard-of-care surgery (including valve surgery, placement of LV assist device, or imminent heart transplantation), coronary artery bypass grafting (CABG) procedure, and/or percutaneous coronary intervention (PCI). Candidates cannot be UNOS 1A or 1B, and they must have documented low probability of being transplanted.
- PCI within 3 months of randomization
- CABG within 4 months of randomization
- Valvular heart disease including mechanical or bioprosthetic heart valve, severe valvular (any valve) insufficiency/regurgitation within 12 months of consent, and aortic stenosis with valve area $\leq 1.5 \text{ cm}^2$
- History of ischemic or hemorrhagic stroke within 90 days of consent
- History of an LV remodeling surgical procedure utilizing prosthetic material
- Presence of a pacemaker and/or ICD generator with any of the following limitations/conditions:
 - manufactured before the year 2000
 - leads implanted < 6 weeks prior to consent
 - non-transvenous epicardial or abandoned leads
 - subcutaneous ICDs
 - leadless pacemakers
 - any other condition that, in the judgment of device-trained staff, would deem an MRI contraindicated
- Pacemaker-dependence with an ICD (pacemaker-dependent candidates without an ICD are not excluded)
- A cardiac resynchronization therapy (CRT) device implanted within 3 months of consent
- Other MRI contraindications (e.g., patient body habitus incompatible with MRI)
- An appropriate ICD firing or anti-tachycardia pacing (ATP) for ventricular fibrillation or ventricular tachycardia within 30 days of consent

- Ventricular tachycardia (\geq 20 consecutive beats) without an ICD within 3 months of consent, or symptomatic Mobitz II or higher degree atrioventricular block without a functioning pacemaker within 3 months of consent
 - Presence of LV thrombus
 - Baseline VO_2 max $>$ 75% of age and gender based predictive values
 - Baseline eGFR $<$ 35 ml/min/1.73 m²
 - Poorly controlled blood glucose levels (HbA1c $>$ 10%)
 - Hematologic abnormality evidenced by hematocrit $<$ 25%, white blood cell $<$ 2,500/ μ l or platelet count $<$ 100,000/ μ l
 - Liver dysfunction evidenced by enzymes (AST and ALT) $>$ 3 times the ULN
 - Coagulopathy (INR \geq 1.3) not due to a reversible cause (e.g., warfarin and/or Factor Xa inhibitors). Patients who cannot be withdrawn from anticoagulation will be excluded.
 - HIV and/or active HBV or HCV
 - Allergy to radiographic contrast material that cannot adequately be managed by premedication
 - Known history of anaphylactic reaction to penicillin or streptomycin
 - Received gene or cell-based therapy from any source within the previous 12 months
 - History of malignancy within 5 years, excluding basal cell carcinoma and cervical carcinoma *in situ* which have been definitively treated
 - Condition that limits lifespan to $<$ 1 year
 - History of drug or alcohol abuse
 - Participation in an investigational therapeutic or device trial within 30 days of consent
 - Cognitive or language barriers that prohibit obtaining informed consent or any study elements
 - Pregnancy or lactation or plans to become pregnant in the next 12 months
 - Any other condition that, in the judgment of the Investigator or Sponsor, would impair enrollment, study product administration, or follow-up
-

Supplemental Table 2. Summary of Manufactured Products

Characteristics of Manufactured Products*	MSC Products (N=41)			CPC Products (N=48)		
	Mean ± SD	Min	Max	Mean ± SD	Min	Max
Cell Count Total Yield (x10 ⁶)	197.4 ± 92.1	78.8	545.0	16.8 ± 11.7	2.0	48.0
