

Fig. S1 Deficiency of hepatocytes p65 attenuated hepatocellular carcinogenesis in mice. (a) AFP levels of WT and L-p65-KO mice. **(b)** Quantification of average liver weight versus body weight in WT and L-p65-KO mice. **(c)** Maximal size of liver tumors measured by a caliper. **(d)** Average tumor numbers at 9 months. All values are mean \pm SD (n=10 for each group). $P < 0.05$ by using Student's *t*-test.
