

Fig. S3 The mRNA levels of *p65* and *TNF-α* in the acute inflammatory mouse models were measured by Real time-PCR. **(a)** The mRNA level of *p65* was elevated in liver tissues after intraperitoneal injection of CCl₄ for 2 months, DEN for 10 days, or TNF-α (40 μg/kg) for 6h. **(b)** The *TNF-α* mRNA level was elevated in liver tissues after intraperitoneal injection of CCl₄ for 2 months, DEN for 10 days, or TNF-α (40 μg/kg) for 6h. All values are mean ± SD (n=6 in each group). *P*<0.05 by using Student's *t*-test.
