

S4 Fig

A

B

S4 Fig. Pearson correlation coefficient (PCC) as patient similarity metric. (A)

Patient-patient network colored by four cluster numbers. All edges have PCC < 0.65 for the patient pairs. All data preprocessing and PCC cutoff selection were same with the method cosine similarity calculation. The network was visualized using Cytoscape v 3.7.1.

(B) Kaplan-Meier curves to estimate the all cause survival probability in the four subgroups. The Log-rank test were used to evaluate the statistical significance.
