

(A) Either *HMGXB3* mRNA 3'UTR (full length 3'UTR) or *c-fms* mRNA 3'UTR (full length 3'UTR) was fused to the 3'end of firefly luciferase Mut E mRNA in pcDNA3.1(-) (Baggett et al. 2004).

(B) miR-324-5p mimic decreases and miR-324-5p inhibitor increases luciferase-HMGXB3 mRNA 3'UTR reporter expression. n=4. Four independent experiments were performed, and the average and standard deviation is presented.

(C) miR-324-5p mimic increases and miR-324-5p inhibitor decreases luciferase-*c-fms* mRNA 3'UTR reporter expression. n=4. Four independent experiments were performed, and the average and standard deviation is presented.
