

**Table S3. P-values of overall tests (One-way ANOVA or Kruskal-Wallis test for numeric variables – noted with <sup>m</sup> – and  $\chi^2$  or Fisher’s exact test for categorical variables – noted with <sup>p</sup>) and post-hoc tests for ethnic community comparison according to place of living in female adolescents.**

	All				Rural				Urban			
	Overall test <sup>*</sup>	Post-hoc test			Overall test <sup>*</sup>	Post-hoc test			Overall test <sup>*</sup>	Post-hoc test		
		M-C	M-P	C-P		M-C	M-P	C-P		M-C	M-P	C-P

In the “Post-hoc test” columns: “M-C” sub-columns mean comparison between Melanesians and Caucasians, “M-P” sub-columns mean comparison between Melanesians and Polynesians and “C-P” sub-columns mean comparison between Caucasians and Polynesians.

<sup>m</sup> Numerical factors.

<sup>p</sup> Categorical factors.

\* Superscript letters inform about the effect size magnitude: small (S), moderate (M) and large (L).
