

Supplemental Table 3: Detailed results from analysis of LSRs in subjects with vs. without prevalent VFx (SQ2+) for nine key activities

First performed a 2-way repeated-measures ANOVA for VFx and Level, then post-hoc contrasts by level with Bonferroni corrections if VFx or interaction was significant.

Supplemental Table 3 (continued)

Activity 16		LSR													
		N	T4	T5	T6	T7	T8	T9	T10	T11	T12	L1	L2	L3	L4
No VFx	Mean	126	0.222	0.230	0.241	0.229	0.218	0.205	0.200	0.206	0.215	0.192	0.160	0.156	0.149
	SD		0.077	0.083	0.084	0.077	0.070	0.068	0.068	0.068	0.068	0.059	0.054	0.053	0.048
Prevalent VFx	Mean	21	0.242	0.256	0.268	0.251	0.253	0.233	0.246	0.249	0.251	0.228	0.183	0.182	0.192
	SD		0.088	0.132	0.126	0.093	0.123	0.142	0.153	0.139	0.132	0.113	0.091	0.089	0.142

ANOVA		p-value
VFx		0.056
Level		<0.0001
VFx x Level		0.4386

Supplemental Table 3 (concluded)
