

**Supplementary Table 1***Mean Scores and Standard Deviations on the Pediatric Quality of Life Family Impact Module*

Family Impact Module Scale	<i>M</i> (SD)
Total	74.21 (17.7) <sup>a</sup>
Caregiver Quality of Life	72.61 (19.5) <sup>a</sup>
Physical Functioning	69.07 (22.5)
Emotional Functioning	68.30 (22.5)
Social Functioning	78.66 (20.2)
Cognitive Functioning	75.80 (22.1)
Family Functioning	77.89 (20.9) <sup>c</sup>
Daily Activities	72.46 (24.0) <sup>c</sup>
Family Relationships	80.98 (23.8) <sup>c</sup>
Communication	82.43 (20.2)
Worry	70.63 (24.9) <sup>b</sup>

*Note:* <sup>a</sup>Significantly lower (i.e., greater impact) than the brain injury sample reported by de Kloet et al. (2015) at  $p \leq .05$ ; <sup>b</sup>Significantly lower (i.e., greater impact) than the community sample reported by Medrano et al, 2013 at  $p \leq .05$ ; <sup>c</sup>Significantly higher (i.e., lower impact) than the community sample reported by Medrano et al, 2013 at  $p \leq .05$ .
