

Supplementary Table 2. The Frequency and Malignancy Risk for Nodules according to the Categories of 2016 K-TIRADS and Modified K-TIRADS

US Risk Stratification System	Benign (n = 4597)	Malignant (n = 1111)	Total Nodules (n = 5708, %)	Calculated Risk of Malignancy (%)
2016 K-TIRADS				
High suspicion	245	536	781 (13.7)	68.6
Intermediate suspicion	1207	364	1571 (27.5)	23.2
Low suspicion	2860	203	3063 (53.7)	6.6
Benign	285	8	293 (5.1)	2.7
Modified K-TIRADS				
High suspicion	244	536	780 (13.7)	68.7
Intermediate suspicion	1180	362	1542 (27.0)	23.5
Low suspicion	2864	204	3068 (53.7)	6.6
Benign	309	9	318 (5.6)	2.8

K-TIRADS = Korean Thyroid Imaging Reporting and Data System, US = ultrasonography
