

THE LANCET HIV

Supplementary appendix

This appendix formed part of the original submission and has been peer reviewed. We post it as supplied by the authors.

Supplement to: Wei F, Gaisa MM, D'Souza G, et al. Epidemiology of anal human papillomavirus infection and high-grade squamous intraepithelial lesions in 29 900 men according to HIV status, sexuality, and age: a collaborative pooled analysis of 64 studies. *Lancet HIV* 2021; published online July 30. [http://dx.doi.org/10.1016/S2352-3018\(21\)00108-9](http://dx.doi.org/10.1016/S2352-3018(21)00108-9).

HIV+=HIV-positive. HIV-=HIV-negative. MSM=men who have sex with men. MSW=men who have sex with women. Ticks (✓) indicate these studies collected and shared the corresponding data with us. *Relative data were extracted from the original papers by age group. †All or part of men in these studies self-collected anal samples. ‡These studies enrolled a fraction of transgender women. §These studies were deemed to be the population-based studies for which men were assumed to be HIV-negative, even in the absence of such information at an individual level.

Appendix Table 2: Prevalence of anal HSIL+ in studies that performed HRA in all participants and enrolled both HIV-positive and HIV-negative MSM.

	Anal HSIL+ in all MSM (N=2004)		HPV16-positive anal HSIL+* in all MSM (N=2004)		Anal HSIL+ in HPV16-positive MSM (N=460)

Appendix Figure 3: Overall and age-specific distribution of number of HR-HPV infections in four male risk groups. HR-HPV=high-risk human papillomavirus=HPV16, 18, 31, 33, 35, 39, 45, 51, 52, 56, 58, 59, and 68. HIV+=HIV positive; HIV-=HIV negative. MSM=men who have sex with men. MSW=men who have sex with women.

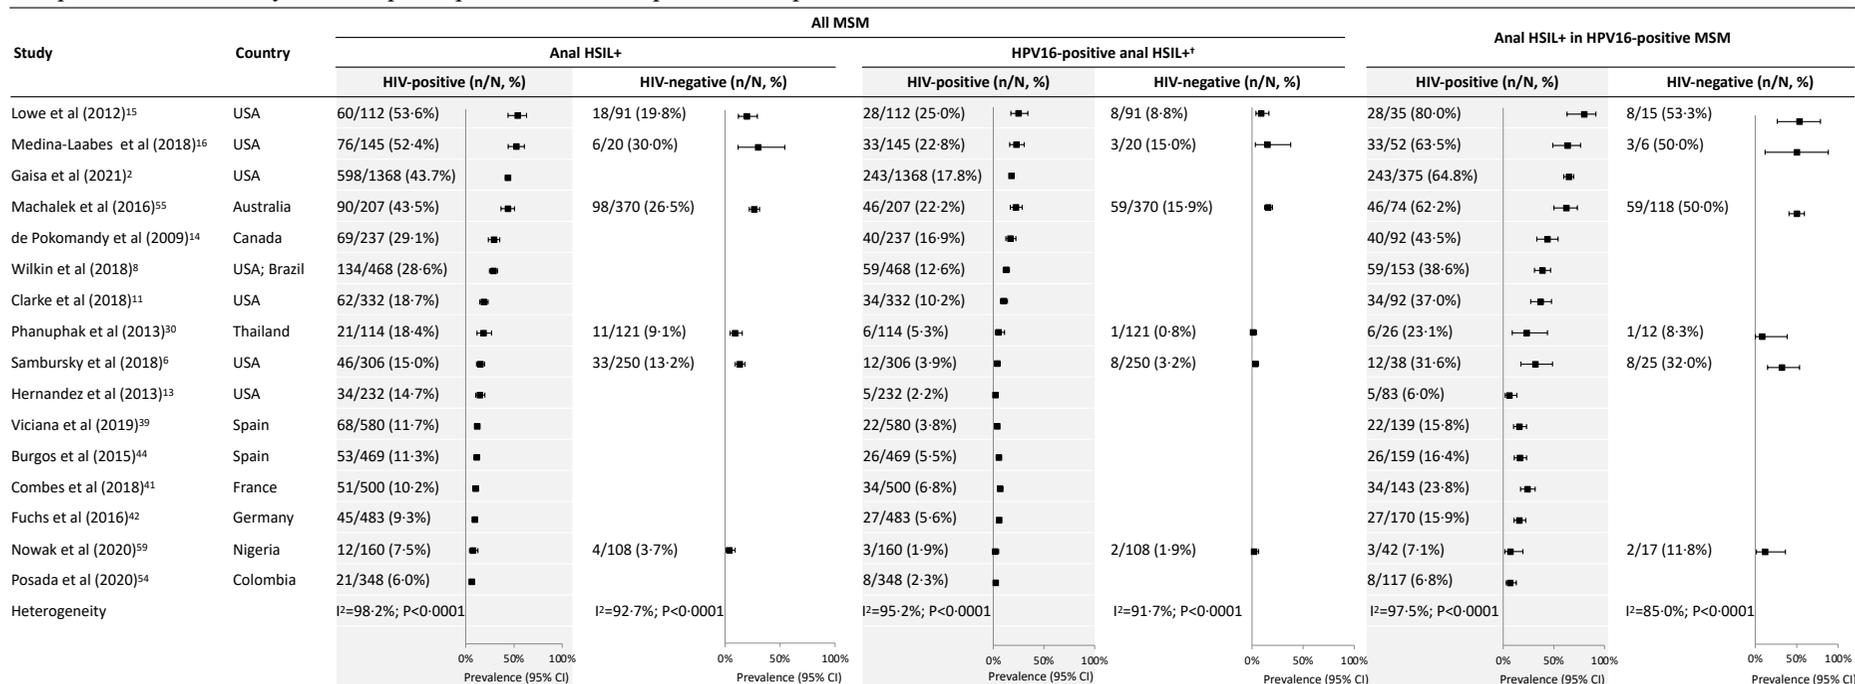

Appendix Figure 4: Prevalence of A) HPV16 and B) HR-HPV infection in four male risk groups with or without cytopathological data. Error bars show 95% CIs. PRs were adjusted for age group. HR-HPV=high-risk human papillomavirus=HPV16, 18, 31, 33, 35, 39, 45, 51, 52, 56, 58, 59, and 68. HIV+=HIV positive. HIV-=HIV negative. MSM=men who have sex with men. MSW=men who have sex with women. PR=prevalence ratio (no cytopathology versus cytopathology). aPR=adjusted prevalence ratio (no cytopathology versus cytopathology). Significant PRs and aPRs relative to the reference group are shown in bold. Solid circles indicate men without cytopathological data, and open circles indicate men with cytopathological data.

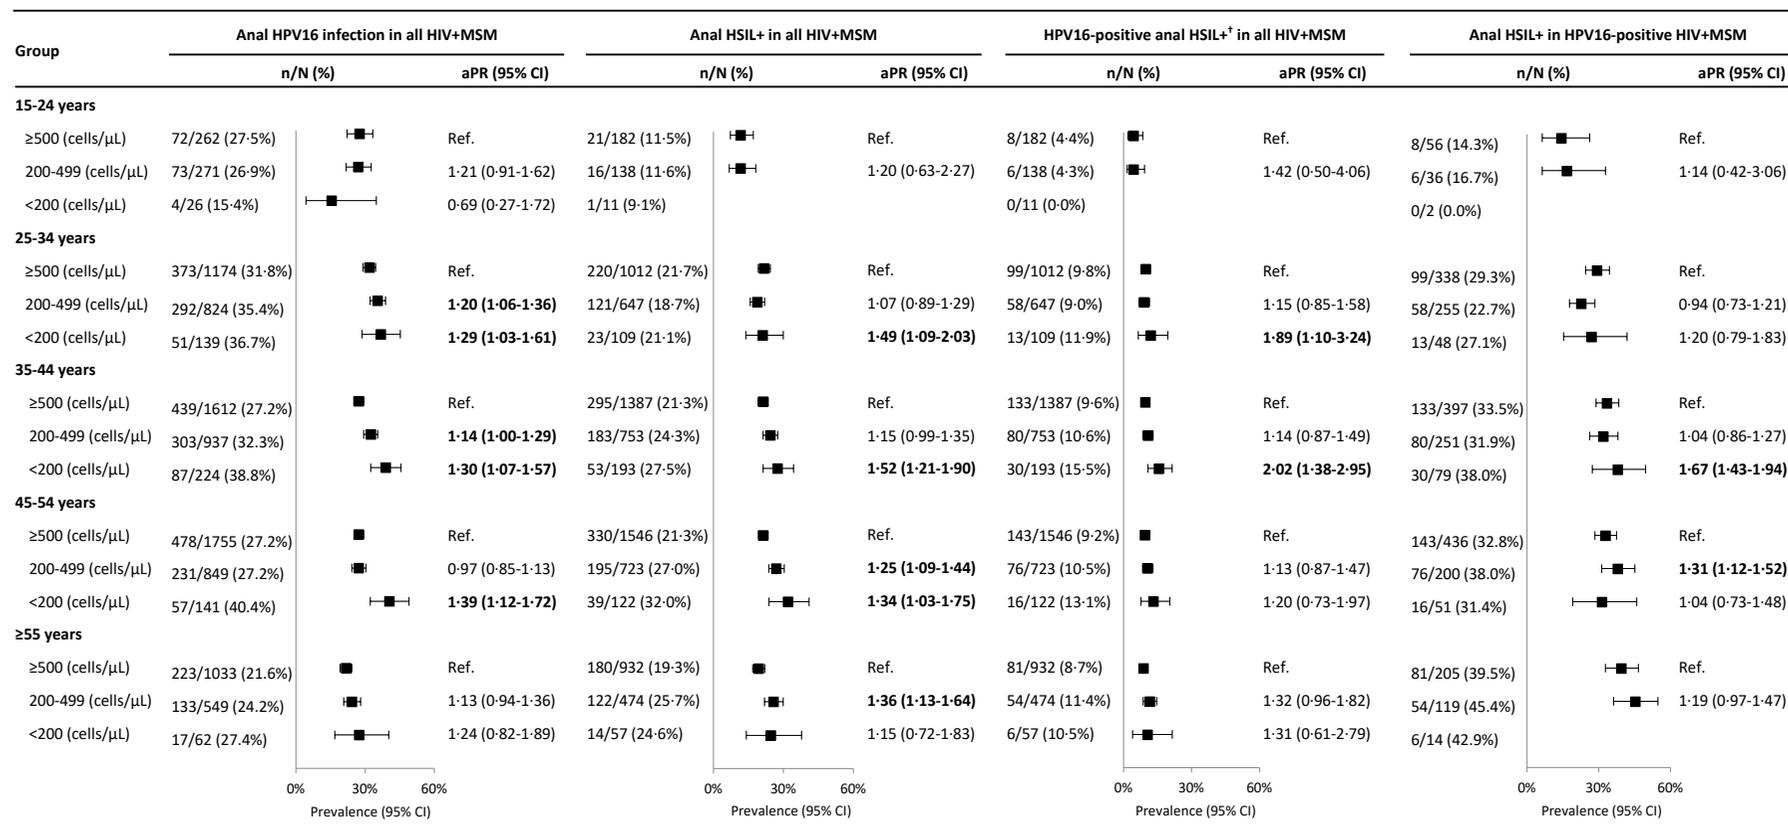

Appendix Figure 5: Prevalence of anal HPV infection in men with or without cytopathological data by age group: A) HPV16 in HIV-positive MSM, B) HR-HPV in HIV-positive MSM, C) HPV16 in HIV-negative MSM, and D) HR-HPV in HIV-negative MSM. Error bars show 95% CIs. HR-HPV=high-risk human papillomavirus=HPV16, 18, 31, 33, 35, 39, 45, 51, 52, 56, 58, 59, and 68. MSM=men who have sex with men. PR=prevalence ratio (no cytopathology versus cytopathology). Significant PRs relative to the reference group are shown in bold. Solid circles indicate men without cytopathological data, and open circles indicate men with cytopathological data.

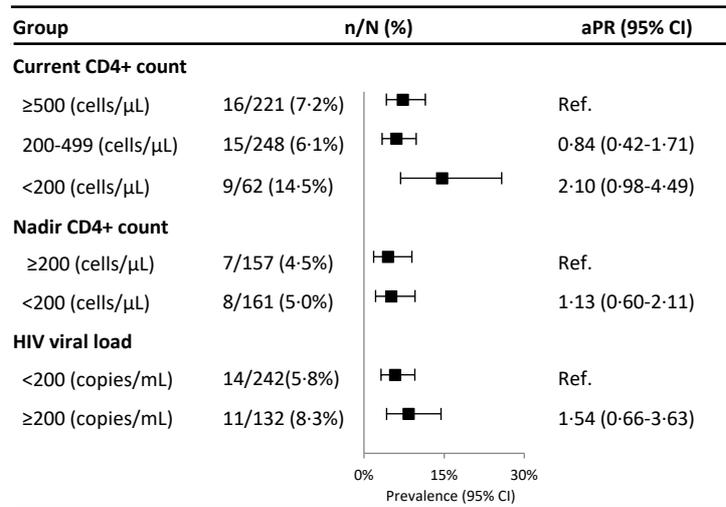

Appendix Figure 6: Prevalence of anal histological HSIL+ in studies that performed HRA in all participants. Error bars show 95% CIs. HPV=human papillomavirus. HSIL+=high-grade squamous intraepithelial lesions and worse. MSM=men who have sex with men. These studies are ranked in descending order of HSIL+ prevalence in HIV-positive MSM. *Only includes participants with HSIL+ plus HPV16-positive swabs.

Appendix Figure 7: Prevalence of anal HPV16 and anal HSIL+ in HIV-positive MSM, according to current CD4+ cell count, stratified by age group. Error bars show 95% CIs. PRs were adjusted for study. HPV=human papillomavirus. HIV+=HIV positive. HSIL+=high-grade squamous intraepithelial lesions and worse. MSM=men who have sex with men. aPR=aadjusted prevalence ratio. Significant aPRs relative to the reference group are shown in bold. *Only includes participants with HSIL+ plus HPV16-positive swabs. Note: The points (with 95% CIs) and aPRs (with 95% CIs) are not shown if the denominators were below 20.

Appendix Figure 8: Prevalence of anal HPV16 in HIV-positive MSW, according to current CD4+ cell count, nadir CD4+ cell count, and HIV viral load. Error bars show 95% CIs. PRs were adjusted for age group and study. HPV=human papillomavirus. MSW=men who have sex with women. aPR=adjusted prevalence ratio.
