

Figure S7. EMT induction in J82 bladder cancer cells increases rate of cellular lactate release.

A, Representative phase contrast images showing induction of a mesenchymal-like morphology (indicated by black arrows) in J82 bladder cancer cells following 48h treatment with FGF2 or FGF2 and heparin.

B, Effect of indicated treatments on the rate of cellular lactate release by J82 cells relative to that of solvent control treated cells, mean \pm SD of three independent determinations.
