

Circulating T cell subsets 9 days post-immunization

■ EAE- Vehicle
■ EAE- NG-MDP

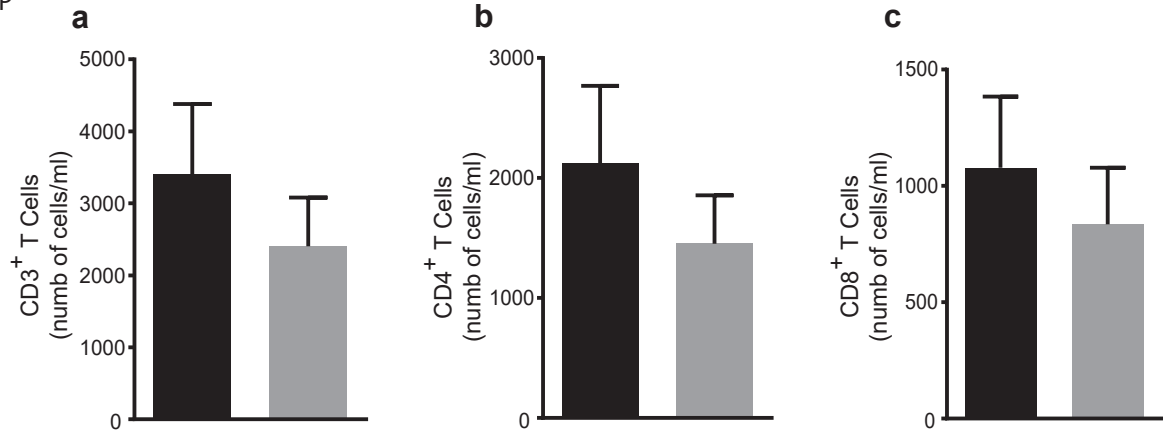

Fig. S4 Flow cytometry results of circulating T cell subsets 21 days post-immunization in WT and NOD2^{-/-} mice following MDP treatment.

(a), (b) and (c) Absolute count of blood CD3⁺, CD4⁺, and CD8⁺ T cells respectively following treatment with vehicle or MDP in EAE-WT and EAE- NOD2^{-/-} mice as measured by FACS 21 days post immunization. No significant change was observed.
