

Circulating T cell subsets 21 days post-immunization

■ EAE-Vehicle
■ EAE-MDP
■ EAE/Nod2^{-/-}- Vehicle
■ EAE/Nod2^{-/-}- MDP

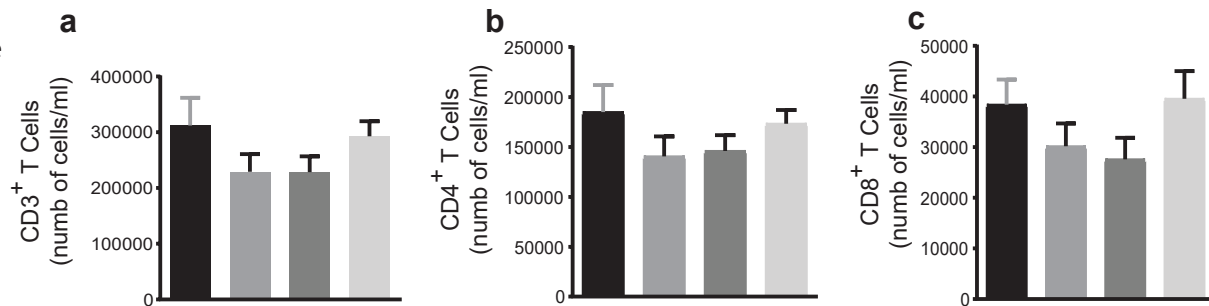

Fig. S5 Flow cytometry results of circulating T cell subsets 9 days post-immunization in mice following NG-MDP treatment.

(a), (b) and (c) Absolute count of blood CD3⁺, CD4⁺, and CD8⁺ T cells respectively following treatment with vehicle or NG-MDP in EAE mice as measured by FACS 9 days post immunization. No significant change was observed.
