

Supplemental Figure 1. Peritoneal macrophages were treated with various TLR ligands for 4 hours. The supernatants were collected for ELISA to determine the concentrations of IL-6 (left panel) and IL-12p40 (right panel). $n=3$ mice per group. Data represent mean \pm SEM. * = $P < 0.05$, ** $P < 0.01$, *** $P < 0.005$.
