**eFigure 1.** Representative Morphological Features of VETC in HCC Tissues by Immunohistochemical Staining of Human CD34

(A) VETC-positive phenotype distinguished by vessels that formed a cobweb-like pattern and encapsulated tumor clusters.

(B) VETC-negative phenotype distinguished by the presence of capillary vessels.

Abbreviations: VETC, vessels encapsulating tumor clusters; HCC, hepatocellular carcinoma.

A

VETC-positive

B

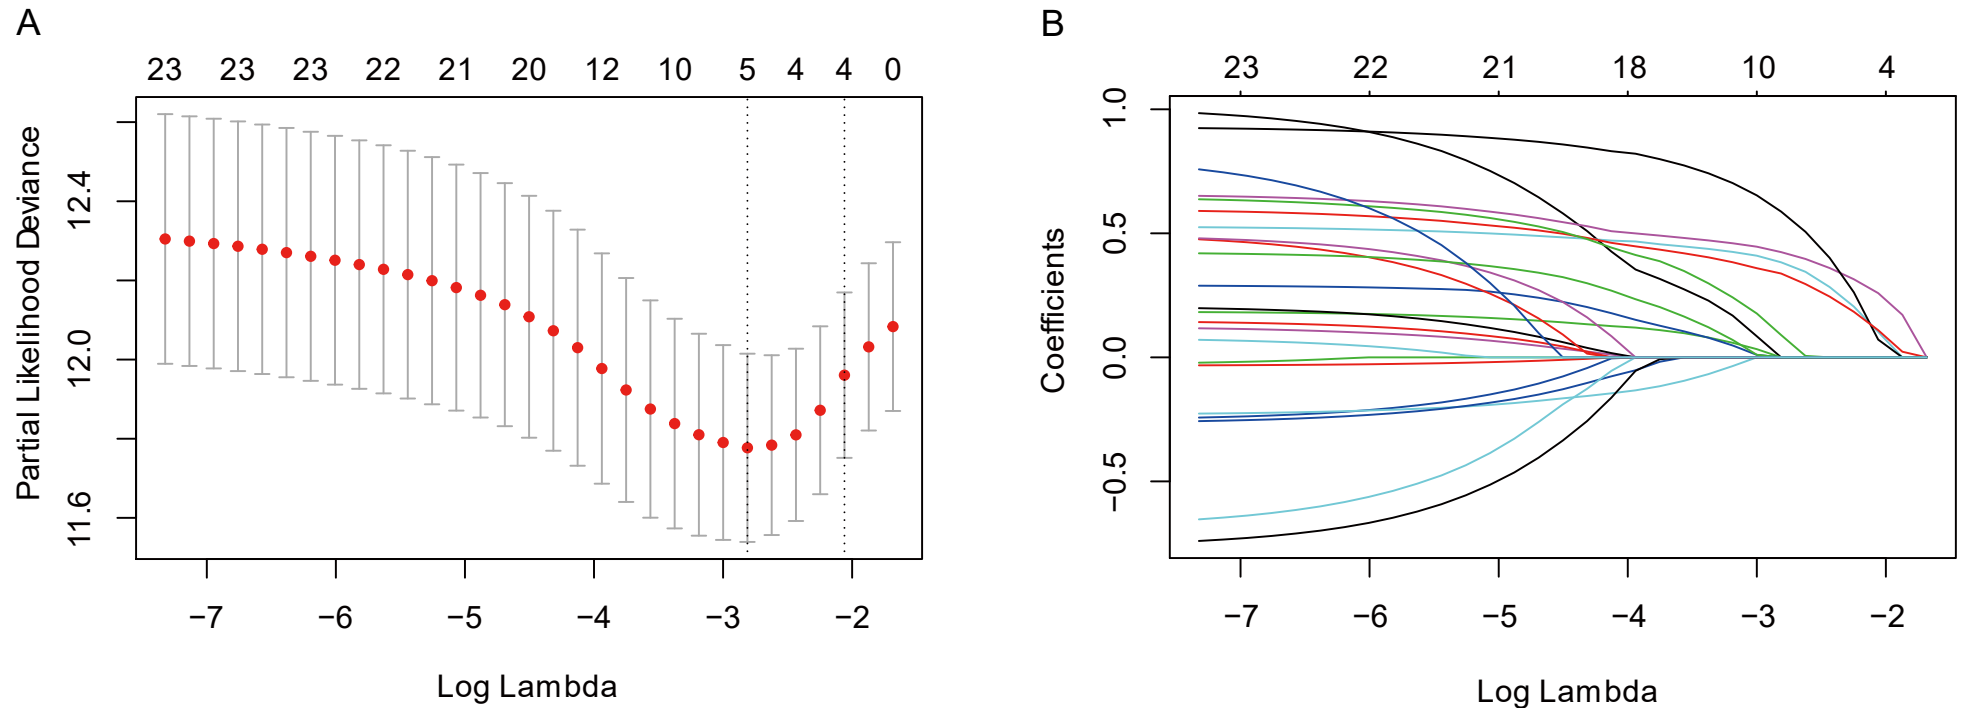

VETC-negative

**eFigure 2.** Variable Selection Using LASSO Cox Proportional Hazards Regression Model

(A) The two vertical lines are drawn at the optimal values by minimum criteria (left) and 1-SE criteria (right), which result in selecting 5 variables (VETC, MVI, tumor number, ln (maximum tumor size) and tumor differentiation) and 4 variables (VETC, MVI, tumor number and ln (maximum tumor size)), respectively. Details are provided in Methods.

(B) LASSO coefficient profiles of the 23 variables. Each curve corresponds to a variable.

Abbreviations: LASSO, the least absolute shrinkage and selection operator; SE, standard error; VETC, vessels encapsulating tumor clusters; MVI, microvascular invasion.

**eFigure 3.** Calibration Curves of the VMNS Nomogram at 2 Years in Each Cohort

(A, training cohort; B, internal validation cohort; C, external validation cohort). Abbreviations: RFS, recurrence-free survival; VMNS, VETC (vessels encapsulating tumor clusters) -MVI (microvascular invasion)-number-size.
