

Figure S1. Effect of Dectin-2, Mincle and CARD9 deficiency on the phagocytosis of *C.*

neoformans B3501 strain by BM-DCs BM-DCs prepared from WT and Dectin-2KO (A),

CARD9KO (B), and MincleKO (C) mice were cultured with *C. neoformans* B3501 for 2 h. These cells

were spun down onto a slide glass, stained with PAS and observed under a light microscope. The

proportions of phagocytosed cells are shown. Each column represents the mean \pm SD of triplicate

cultures. NS, not significant.
