

**Supplemental Table SI.** Estimated geometric mean leukocyte telomere length and confidence intervals for minimally- and fully-adjusted models. *P* for trend are 2 sided.

Age at Last Birth (years)	N	LTL Geometric Mean <sup>a</sup>	95% Confidence Interval
Minimally-Adjusted Model <sup>b</sup>			
< 25	170	0.89	0.82-0.96
25-29	300	0.91	0.86-0.97
30-34	331	0.92	0.87-0.96
35-39	289	0.93	0.90-0.97
≥ 40	142	0.96	0.88-1.05
			<i>P</i> <sub>trend</sub> <sup>d</sup> = 0.03
			<i>P</i> <sub>continuous</sub> <sup>e</sup> = 0.04
Fully-Adjusted Model <sup>c</sup>			
< 25	170	0.90	0.84-0.97
25-29	300	0.93	0.88-0.98
30-34	331	0.93	0.88-0.98
35-39	289	0.95	0.90-0.99
≥ 40	142	0.96	0.88-1.05
			<i>P</i> <sub>trend</sub> <sup>d</sup> = 0.04
			<i>P</i> <sub>continuous</sub> <sup>e</sup> = 0.04

<sup>a</sup> LTL stands for leukocyte telomere length.

<sup>b</sup> Adjusted for age at blood collection and race/ethnicity.

<sup>c</sup> Adjusted for age at blood collection, race/ethnicity, number of live births, and history of hysterectomy and/or oophorectomy.

<sup>d</sup> *P*-value for age at last birth treated as an ordinal variable.

<sup>e</sup> *P*-value for age at last birth treated as a continuous variable.
