

Supplementary Table 4: History of COVID-19 like symptoms and seropositivity vis-à-vis history of chronic disease

		History of COVID-19 like symptoms	
		Yes	No
Reported history of chronic disease (n=1145)	Seropositive	78	417
	Seronegative	63	587
Did not report any history of chronic disease (n=5085)	Seropositive	169	1751
	Seronegative	164	3001

Of the 1154 participants who reported a history of chronic disease 78 (6.8%) reported a history of COVID-19 like symptoms within three months of the interview date and were seropositive for SARS-CoV-2 specific IgG (symptomatic infection). The proportion of symptomatic infection among participants who did not report any history of chronic disease was 3.3% (169/5085).
