Supplemental Material

Exposure to Air Pollution in Relation to Risk of Dementia and Related Outcomes: An Updated Systematic Review of the Epidemiological Literature

Jennifer Weuve, Erin E. Bennett, Lysie Ranker, Kan Z. Gianattasio, Meredith Pedde, Sara D. Adar, Jeff D. Yanosky, and Melinda C. Power

Table of Contents

Table 1. Summary of study characteristics for eligible studies on air pollution and late-life cognitive health identified through December 31, 2020 (**also available in the manuscript, in alternate format**).

Table 2. Summary of quality assessment for eligible studies on air pollution and late-life cognitive health identified through December 31, 2020 (**also available in the manuscript, in alternate format**).

Appendix A. Original PubMed and EMBASE Search Criteria with Updated Search Dates

Appendix B. New PubMed and EMBASE Search Criteria to Improve Identification of Articles Reporting on Neuroimaging Outcomes

Appendix C. Information Abstracted on Each Eligible Article

Appendix D. Citations for Articles for Full-Text Review

Table S1. Associations between air pollution exposure and cognitive level in qualifying studies.

Table S2. Associations between air pollution exposure and cognitive change in qualifying studies.

Table S3. Associations between air pollution exposure and incident dementia/cognitive impairment in qualifying studies.

Table S4. Associations between air pollution exposure and neuroimaging outcomes in qualifying studies.

Table S5. Associations between traffic-related air pollution exposure and cognitive level in qualifying studies.

Table S6. Associations between traffic-related air pollution exposure and cognitive change in qualifying studies.

Table S7. Associations between traffic-related air pollution exposure and incident dementia/cognitive impairment in qualifying studies.

Table S8. Associations between traffic-related air pollution exposure and neuroimaging outcomes in qualifying studies.

Figure S1. Flowchart for identification of eligible articles for inclusion in this systematic review.

Figure S2. Associations between NO₂ exposure and cognitive level in qualifying studies.

Figure S3. Associations between PM_{2.5} exposure and cognitive level in qualifying studies.

Figure S4. Associations between PM_{2.5} exposure and cognitive change in qualifying studies.

Figure S5. Associations between PM_{2.5} exposure and MRI volumetric outcomes in qualifying studies.

Figure S6. Associations between PM_{2.5} exposure and MRI cerebrovascular outcomes in qualifying studies.

Figure S7. Associations between PM₁₀ exposure and cognitive level in qualifying studies.
