

Title: Supplementary Data 1.

Description: Classifier genes with Affymetrix ID, HGNC Gene Symbol, ENTREZ ID and expression rank in excluded, ignored and inflamed triple-negative breast cancer.

Title: Supplementary Data 2.

Description: General information regarding data of Cohort A; individual GSM accession codes and coded sample annotation that allow for integrative analyses of clinical-, imaging- and omics data; extended clinical data; extended pathological and IHC scores including T cell density, necrosis and tertiary lymphoid structures (TLS); omics analyses including MIXCR and CIBERSORT outputs; imaging of individual immune markers (manually scored as percentage of all cells) as well as multispectral imaging data regarding immune effector cells and markers related to T cell evasion derived through VECTRA/inform analysis (numbers of cells per mm² and collagen-10 as area).

Title: Supplementary Data 3.

Description: Immunophenotypes based on IHC and classifier gene expressions (raw counts and gene lengths) of cohort F which includes lymph node metastases and matched primary triple negative breast cancer.
