

Thyroxine induces acute relaxation of rat skeletal muscle arteries via integrin $\alpha\beta3$, ERK1/2 and integrin-linked kinase

Ekaterina Selivanova, Dina Gaynullina, Olga Tarasova

Supplementary Materials

Supplementary Figure 1. T₄ does not affect phospho-Akt (Ser473) content in sural arteries. The representative membrane parts are shown in the top. Data were normalized to β -actin level in the same sample and then the average value of two reference samples was taken as 100%. Number in parentheses represents the number of animals.
