

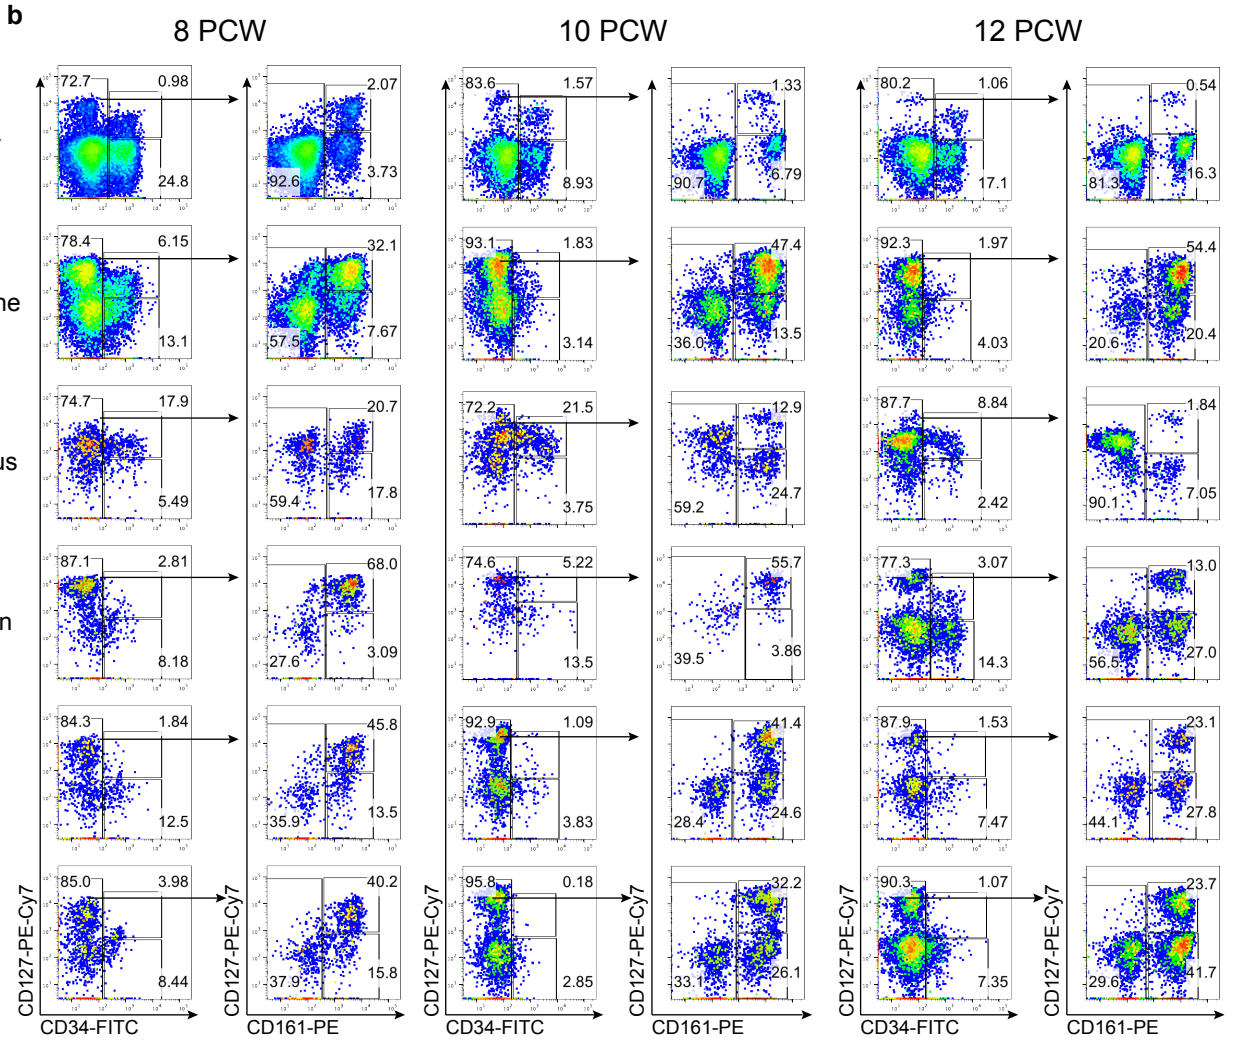

Figure S3

Supplementary Figure 3 (related to Figure 1) Flow cytometric analysis of samples used for 10x genomics sequencing

(a) Sorting strategy of human fetal ILC associated populations, which were all gated from 7-AAD⁻Lin⁻CD45⁺, CD34⁺CD127⁺ lymphoid progenitors, CD34⁺CD127⁻HSPCs, CD34⁻CD161⁺CD127^{+/-} ILCs and CD34⁻CD161⁻ cells were sorted simultaneously and mixed at certain ratio described in Figure S1 from each tissue. **(b)** Representative flow cytometry plots show frequencies of five cell populations above from an individual sample at each stage.
